Degree	Subject-matter	Character
1402 - Degree in Telecommunications Electronic Engineering	9 - Programming	Obligatory

Coordination

Name	Department
ORTIGOSA ARAQUE, NURIA	240 - Computer Science

SUMMARY

Programming has 6 ECTS, is taught in the second semester of the second course in Telecommunication Electronics Engineering Degree. Its purpose is to give students an introduction to the Java programming language and provide a broad view of different APIs for the development of network and distributed applications. After completing the course students should be able to develop applications using networked and properly distributed object-oriented, parameterized types, class hierarchies, concurrency and synchronization of concurrent tasks.

The general objectives are listed below:

- Develop applications using object-oriented concepts.
- Declaring and using appropriate class hierarchies, abstract classes, interfaces and parameterized types.
- Develop applications that use concurrency and shared resources to synchronize tasks using semaphores or monitors.
- Create input and output streams given some specifications.

- Develop networked applications using different protocols.
- Use integrated development environments for development, debugging and execution applications.
- Use appropriate tools to compile and run applications.

PREVIOUS KNOWLEDGE

Relationship to other subjects of the same degree

There are no specified enrollment restrictions with other subjects of the curriculum.

Other requirements

To a proper understanding of the subject matter it is recommended to have the background given in an introductory course in programming, as the provided in the subject Informatica.

1402 - Degree in Telecommunications Electronic Engineering

- G3 - Acquisition of the knowledge of the basic and technological subjects that allows students to learn new methods and theories and endows them with the versatility to adapt to new situations.
- G4 - Ability to solve problems with initiative, decision-making and creativity, and to communicate and transmit knowledge, abilities and skills, understanding the ethical and professional responsibility of the activity of a telecommunications technical engineer.
- R7 - Understand and use the basic principles of programming for telecommunication networks, systems and services.

- Declare classes to create new types, creating objects and sending messages. Use the types defined by language (R7).
- Declare and use class hierarchies (R7).
- Declare and use parameterized types and use those provided by the language (R7).
- Declare and use threads for concurrent execution of code (R7).
- Explain and use semaphores and monitors to synchronize tasks when accessing shared resources (R7).
- List and use input/output streams. Use streams to add functionality to other low level streams (R3).
- Declare classes whose instances can be serialized (R7).
- Develop applications that use UDP: unicast and multicast (R7).
- Develop applications that use the TCP protocol using sockets (R7).
- Use integrated development environments for development, debugging and running applications (R2).

In addition, the student must develop the following skills:

- Find and interpret information in the Java API (G3).
- Discuss the advantages / disadvantages of different approaches to solve a given problem (G4).
- Develop, write and present academic texts. There will also be emphasized that any written text should have some quality standards based on cohesion, clarity, logic, ... of the arguments and evidence contained therein (G4).

DESCRIPTION OF CONTENTS

1. Object Oriented Programming in Java

Review of concepts: classes, methods, objects, messages and encapsulation.
Reference vs. primitive types.
Inheritance, class hierarchies, abstract classes, interfaces, polymorphism
Parameterized types: declaration and use.
Exceptions: declaration and treatment.

2. Concurrent Programming

Concurrent tasks with threads
Problems accessing to shared resources: critical section
Synchronization mechanisms of concurrent tasks: semaphores and monitors

3. Input and Output

Input and output byte-oriented streams
Input and output character-oriented streams
Object serialization

4. Network and distributed programming

Applications based on UDP, TCP and HTTP

**WORKLOAD**

ACTIVITY	Hours	% To be attended
Theory classes	30,00	100
Laboratory practices	20,00	100
Classroom practices	10,00	100
Development of group work	10,00	0
Study and independent work	20,00	0
Readings supplementary material	10,00	0
Preparing lectures	10,00	0
Preparation of practical classes and problem	40,00	0
TOTAL	150,00	

TEACHING METHODOLOGY

The methodologies proposed for this subject are:

- Lectures: Development of the themes by providing a global and integrative vision, analyzing in greater detail the key aspects and more complex, encouraging at all times the participation of students. Prior to attending each class, an online test is proposed for the student to review the information to be discussed in class, thus enhancing the participation and solving doubts in the classroom.
- Practical classes in the classroom. They complement the expository lessons in order to apply the basic concepts and expand them with the knowledge and experience that they acquire during the execution of the proposed works.
- Practical classes in the laboratory. Practices will be carried out individually or in small groups in which students will develop theoretical and practical contents through their application in realistic cases using the specific material and under the supervision of the teacher. In each practice, the students will perform an exercise prior to the practice that will be delivered before the practice. This exercise aims to analyze the work to be done in the laboratory, and relate it to the concepts seen in the theoretical classes. Attendance to internships is compulsory and is a non-recoverable activity.
- Autonomous student work. Realization of works, questions, problems outside the classroom, bibliographical searches, as well as the preparation of classes and exams (study). The realization of these activities will sometimes be individual, to empower the student's autonomy, and sometimes in small groups, to enhance the capacity for integration into working groups, as well as leadership and coordination capacity.
- E-learning platform. The e-learning platform (Aula Virtual) of the Universitat de València will be used as a communication support for students, and also for the realization of tests and corrective exercises online. Through it will have access to the didactic material used in class, as well as the problems and solved exercises.

EVALUATION

The evaluation of the course will consider the following dimensions:

- Continuous assessment based on participation and degree of involvement in the teaching-learning process: online tests prior to attending each class, and the regular attendance of activities to solve problems and individual workshops that will be proposed at the e-learning platform (N_Continua) (R2, R3).
- An intermediate individual continuous evaluation exam: midterm exam. It will contain theoretical issues and problems. This test eliminates provided material for the final examination if the score is equal to or greater than five, and the midterm exam's score will average with the final exam's score (Nproves) (R7).
- Evaluation of activities in the laboratory. Occasionally you may make oral presentations (individually and / or group) to evaluate the writing and presentation skills (N_Practicas). To evaluate the grade of each session, previous work will score 35% and development practice 65% (R7).

Final Score= 10% N_Continua + 60% (N_Pruebas) + 30% N_Practicas

All the individual exams' score (midterm and the final one) will be equal or greater than 4 to calculate the final score.

In the second call, there will be a test for theory / problems /laboratory. The final score in the second call will be obtained by the same proposal at the first call or for the alternative assessment:

- Alternative assessment to the continuous assessment. At this assessment, the Final exam will contain both individual theoretical and practical issues and problems (N_Examen).

Nota Score = 70% (NExamen) + 30% NPracticas

The N_Pruebas score will be greater than or equal than 4.

“In any case, the evaluation system will be governed by the one establishes in the Regulation of Evaluation and Qualification of the University of Valencia for Degrees and Masters

<https://webges.uv.es/uvTaeWeb/MuestraInformacionEdictoPublicoFrontAction.do?accion=inicio&idEdictoSeleccionado=5639>”.

ADDENDUM COVID-19

This addendum will only be activated if the health situation requires so and with the prior agreement of the Governing Council

Contents

The contents initially included in the teaching guide are maintained.

Workload and temporary teaching planning

The different activities described in the teaching guide are maintained with the planned dedication.

The material for the follow-up of the classes of theory/practices allows to continue with the professor of temporary planning so much in days as in schedule, so much if the teaching is face-to-face in the classroom or if it is not.

Teaching methodology

In classroom theory and practices, students will tend to have the maximum physical attendance possible, always respecting the sanitary restrictions that limit the capacity of the classrooms as indicated by the competent public health authorities to the estimated percentage of their usual occupation.

Depending on the capacity of the classroom and the number of students enrolled, it may be necessary to distribute the students into two groups. If this situation arises, each group will attend classroom theory and practical sessions with physical presence in the classroom by rotating shifts, thus ensuring compliance with the criteria for occupying spaces.

The rotation system will be established once the actual enrollment data is known, guaranteeing, in any case, that the attendance percentage of all the students enrolled in the subject is the same.

The theory and problems classes can be followed by synchronous videoconference through the Virtual Classroom on the same day and time that they are scheduled.

To complete the theory sessions, students will have material in the virtual classroom for their autonomous work.

With respect to laboratory practices, attendance at sessions scheduled in the schedule will be totally face-to-face.

Once the actual enrollment data is available and the availability of spaces is known, the Academic Committee of the Degree will approve the Teaching Model of the Degree and its adaptation to each subject, establishing in said model the specific conditions in which it will be developed teaching the subject.

If there is a closure of the facilities for sanitary reasons that totally or partially affects the classes of the subject, these will be replaced by non-contact sessions following the established schedules.

Evaluation

The evaluation system described in the teaching guide of the subject in which the different evaluable activities have been specified as well as their contribution to the final grade of the subject is maintained.

If there is a closure of the facilities for health reasons that affect the development of any face-to-face evaluable activity of the subject, it will be replaced by a test of a similar nature that will be carried out in virtual mode using the computer tools licensed by the Universitat de València.

The contribution of each evaluable activity to the final grade for the course will remain unchanged, as established in this guide.

Bibliography

The bibliography recommended in the teaching guide.
