SUMMARY

The aim of the subject "Application Specific training in football" is to provide future graduates in Physical Activity and Sport Sciences a skills training football teams seeking to improve performance specifically. This subject must respond to the features expected of an elective course located in fourth grade. He thus pretend to be explanatory concepts specific procedures i sport and pretend develop the skills necessary for individual training / footballer and football team.

The fact that the curriculum has an introductory compulsory subject football as a team sport is an advantage for the teaching of this subject, ensures that all students have a common baggage. However, we must recognize a great diversity of students in terms of skills acquired outside the university as well as the reduced workload of the course, which involve disadvantages that we must take into account when carrying out teaching .

We understand that the subject "Application Specific training in football," offers a complete training for the graduate / a in Science of Physical Activity and Sport who wants to deepen the knowledge and skills necessary to train and apply to professional football field. Needs a little more, the subject is justified by the need to provide students of Sciences of Physical Activity i Sport of knowledge and skills for planning, design, organization and evaluation of training activities to improve performance in football .

PREVIOUS KNOWLEDGE

Relationship to other subjects of the same degree

There are no specified enrollment restrictions with other subjects of the curriculum.

Other requirements

None.

1312 - Degree in Physical Activity and Sport Sciences

- Conocer y comprender los fundamentos del entrenamiento deportivo en deportes colectivos.
- Planificar, desarrollar y evaluar el proceso de entrenamiento de habilidades motrices en sus distintos niveles y entornos de práctica.
- Apply physiological, biomechanical, behavioural and social principles to the different fields of physical activity and sport.
- Apply the principles of training to football.
- Design, implement and evaluate the processes of collective sports taking into account individual, group and collective characteristics.
- Apply information and communication technologies (ICT) to the field of sports training.

Knowing football, its structure and its characteristics as a team sport, contact and ball, as well as the properties of the competition. Knowing the different classifications of football coach tactical actions and the different criteria used. Being able to handle the structural aspects of game design training activities for teaching and learning of technical tactical actions. Know the different basic motor skills, their relationship and the importance of each in football. Knowing the characteristics of efforts in football and the specific motor skills of football. Knowing the training methods for improving the basic and specific motor skills of football. Being able to handle the structural aspects of the game to design training activities to improve specific motor skills of football. Knowing the principles underlying the offensive and defensive game and be able to apply to the different types of attack and defense. Know and be able to improve the attack-defense and defense-attack game transitions. Knowing the set pieces (ABP) and be able to design and organize the team in such actions. Being able to analyze a team through observation to detect tactical principles used. Understand the organization of a football club and a school and its relationship with the federative estates.

**DESCRIPTION OF CONTENTS****1. Fundamental characteristics of football training**

- 1.1.- Structural and functional elements in football.
- 1.2.- Technical-tactical actions in football.

2. The basic and specific motor qualities involved in football

- 2.1.- Strength-speed in football.
- 2.2.- Endurance in football.
- 2.3.- Resistance to repeated efforts in football.

3. Tactics and strategy in football

- 3.1.-The organisation of offensive and defensive play in football.
- 3.2.- The organisation of transitions in football.
- 3.3.- The systems of play applied to football.
- 3.4.- The set pieces actions.
- 3.5.- The "scouting" of an opposing team.

4. The organisation and management of a football team

- 4.1.- Organisations and organisational structure of a football team.
- 4.2.- The football schools.
- 4.3.- Recruitment of staff in a football team.

WORKLOAD

ACTIVITY	Hours	% To be attended
Theory classes	30,00	100
Classroom practices	30,00	100
Development of group work	10,00	0
Development of individual work	10,00	0
Study and independent work	7,00	0
Readings supplementary material	7,00	0
Preparation of evaluation activities	14,00	0
Preparing lectures	10,00	0
Preparation of practical classes and problem	15,00	0
Resolution of case studies	15,00	0
TOTAL	148,00	

TEACHING METHODOLOGY

Teaching methodology:

Teaching methods that will be used during the course are:

Aprendizaje groups:

- Group dynamics.
- Cooperative learning.
- Study of cases.
- Apprenticeship oriented projects.
- Autonomous Learning.
- Lectures.
- Tutorials.

In the theoretical classes i practices carried out in the classroom will use the lectures, presentations by students, dynamic small group, case study, cooperative learning i pautaremos autonomous learning, while in the field students will participate in practical activities football, as players experiencing those experiences practices proposed by the teacher or peers themselves. Loss students are encouraged at the beginning of practice to reflect on what they are doing, then, in the end, use the Socratic method by questions, answers i suggestions.

Practices that are performed at home strategies for processing information, such as concept mapping and autonomous learning will be used.

Work will be done by pairs of students or individual as well as class presentations. The works performed in the field are essentially individual, although in some cases could be by parjas.

The tutorials will serve to supervise the work i to resolve any questions or problems regarding any content or procedure of the subject.

EVALUATION

To carry out the summative evaluation of the students, the evaluation proposal is the following:

- a) 25% of the grade will correspond to the exam (or to the average of the exams if more than one is taken). Attendance at conferences, seminars and/or workshops related to the subject, such as the Conference promoted by the Training and High Performance Teaching Unit, or by the Sports Fundamentals Teaching Unit, or the organized visit to football clubs outside the course hours will be taken into account in the exam grade, and may result in up to 1 point in the exam.
- b) 25% the weighted average of the grades obtained in the theoretical work and tasks carried out during the course in the theoretical sessions or through the virtual classroom, which must be delivered within the deadline established by the teacher or during the theoretical session.
- c) 20% the Training Programming task, which is prepared at home and will be uploaded to the virtual classroom within the period established in said task.

d) 30% the weighted average of the grades obtained in the practices carried out throughout the course.

Each of the previous sections (a. b. c. and d.) must be approved independently.

Situations that prevent summative evaluation:

Failure to take the exam (section a).

The lack of more than 20% of the theoretical works and tasks (section b).

Failure to deliver the Training Programming task in the virtual classroom within the established deadline (section c).

Failure to attend more than 20% of the practical classes (section d).

There is no type of exemption in practical classes (work, illness, injury, competitions, etc.). In practical classes, justified and unjustified absences are not distinguished for the purpose of absences. For personal needs, students must reserve 20% of the allowed absences.

Those students who cannot take the continuous summative evaluation will have to take a theoretical-practical exam of all the content of the subject, which may be in person or remotely through the virtual classroom at the discretion of the teacher. The final score will be the grade obtained in the final exam. The grade in the case of the second call will be the one obtained in the theoretical-practical exam of the entire content of the subject.

Students are reminded that literally copying, in whole or in part, other people's works, presenting them as their own, will be considered unacceptable conduct in the academic field. On the other hand, and by the Intellectual Property Law, total or partial reproductions of other people's works are usually prohibited, and non-compliance may lead to the corresponding misdemeanors or criminal offenses.
