## SUMMARY

The progressive extension of schooling, typical of the second half of the last century, led to the reorganization of secondary education and even to the generalization and compulsory nature of part of it, although with different educational and curricular policies. These changes are the consequence of multiple economic, social and cultural factors and are not exempt from inconsistencies and problems in their planning, implementation and development. The fundamental tension that is manifested in these policies is related to the segregating or integrating nature that this stage of the educational system must assume, especially, which has become the cornerstone of the subsequent trajectories of the subjects enrolled in it. On the other hand, the massification of secondary education accentuates, in contemporary societies, the crisis of the institutional program with which this stage was conceived. This, in turn, affects the nature and meaning of teachers' work and the meaning and usefulness of students' school activities. What is intended in this matter is to work on these problems, analyzing their complex nature and the strategic alternatives for their resolution. To this end, we will use reference texts and exercises on specific cases and situations in schools, as well as reports and documents from different agencies, institutions and organizations. On the other hand, education is seen as a process that occurs throughout life, and in this sense we will analyze and deepen the conceptualization of permanent education, of which adult education is only a part of it.

## TEACHING METHODOLOGY

The classes will be theoretical-practical. The topics will be developed mainly through the initial reading of academic articles, which will be the basis for the conceptual foundation and for the development of activities. This teaching modality will be complemented with other activities according to the topics covered (text comments, group exercises, group dynamics that help to consolidate the different theoretical knowledge taught in the syllabi, etc.).

## EVALUATION

It is proposed to carry out a test on fundamental questions of the subject, as well as to carry out a series of individual and group activities. In addition to the controls established on a continuous basis, the productions or works carried out, the quality of the answers in different tests, attendance and participation in practical activities, workshops and seminars, individual or group work will be considered. The weighting that will be given to each of the aspects to determine the qualification will be established according to the relevance of the activities and work carried out in each case.
