

COURSE DATA

Data Subject	
Code	33785
Name	Climatology
Cycle	Grade
ECTS Credits	6.0
Academic year	2019 - 2020

Study (s)

Degree	Center	Acad. Period year
1318 - Grado de Geografía y Medio Ambiente	Faculty of Geography and History	1 Second term

Subject-matter

Degree	Subject-matter	Character
1318 - Grado de Geografía y Medio Ambiente	595 - Climatology	Obligatory

Coordination

Name	Department
PEREZ CUEVA, ALEJANDRO	195 - Geography

SUMMARY

By title of Geography, the study of the weather is critical for understanding the physical and human environment. The climate conditions the ground modeling, water resources, the distribution of living things on the planet and human activities. Following the introduction in the main components of the physical environment in the first quarter, this course explores the knowledge of the atmosphere, the dynamic processes that determine the weather, atmospheric circulation and distribution of world climates. It also introduces students to the key climate-male interaction in the current context where climate change is becoming more and more important

PREVIOUS KNOWLEDGE

Relationship to other subjects of the same degree

There are no specified enrollment restrictions with other subjects of the curriculum.

Other requirements

No

OUTCOMES

1318 - Grado de Geografía y Medio Ambiente

- Have capacity for analysis and synthesis.
- Have oral and written communication skills in one's own language and in a foreign language.
- Be able to work independently.
- Be able to work in interdisciplinary teams.
- Show motivation for quality, responsibility and intellectual honesty.
- Learn about physical geography.
- Learn about methodology and fieldwork.
- Be able to relate the natural environment and the social and human spheres.
- Analyse and value landscapes from a spatial-temporal perspective.
- Learn basic techniques for fieldwork in geography and particularly for reading and interpreting the landscape in geographic terms.

LEARNING OUTCOMES

1. Understanding atmospheric processes that determine climate types and distribution of climates in the world.
2. Understanding how the climate system and climate interactions with the environment, highlighting the importance of climate-man interaction.

Specific objectives:

- 1) Develop skills for the analysis and interpretation of climate data
- 2) Knowledge of the main features of the atmospheric circulation, climate types and interpretation of weather maps
- 3) Knowledge of the characteristics, structure and dynamics of air masses
- 4) Identification of the climates of the world from the analysis of climatic variables (temperature, precipitation)
- 5) Knowledge of the global distribution of climate
of climate change is becoming more and more important

DESCRIPTION OF CONTENTS

1. Introduction to the Climatology

- 1.1. Weather and climate
- 1.2. The global climate system
- 1.3. Variability and climatic change

2. The atmosphere: composition and structure

- 2.1. The atmosphere: thickness and composition.
 - 2.1.1. Ozone
 - 2.1.2. Greenhouse gases (GHG)
 - 2.1.3. Water vapor
- 2.2. Vertical structure of the atmosphere
 - 2.2.1. Structure by composition
 - 2.2.2. Thermal structure

3. Solar energy and global warming

- 3.1. Physical Concepts
 - 3.1.1. Heat and temperature
 - 3.1.2. Forms of heat transmission
 - 3.1.3. Electromagnetic radiation. Radiation laws
 - 3.1.4. Solar radiation and terrestrial radiation
- 3.2. Global sunshine on the planet
 - 3.2.1. Radiation Processes
 - 3.2.2. Heat the outer limit of the atmosphere
 - 3.2.3. Heat stroke
- 3.3. Radiation balance
 - 3.3.1. Short wave
 - 3.3.2. The long wave and the "greenhouse effect"
 - 3.3.3. Global energy balance
 - 3.3.4. Climate change
- 3.4. Geographic factors and horizontal energy transfers
- 3.5. Balloon temperatures
 - 3.5.1. Factors that influence the distribution of temperature
 - 3.5.2. Thermal Variations
 - 3.5.3. Global distribution of temperatures

4. Atmospheric humidity and precipitation

- 4.1. Atmospheric humidity
 - 4.1.1. Concept and measurements of humidity
 - 4.1.2. Evapotranspiration
 - 4.1.3. Condensation
- 4.2. Stability and atmospheric instability
 - 4.2.1. Adiabatic processes.
 - 4.2.2. Vertical gradients and instability
 - 4.2.3. Absolute stability and thermal inversions
 - 4.2.4. The foehn effect
- 4.3. Precipitation
 - 4.3.1. Genesis
 - 4.3.2. Types of precipitation
 - 4.3.3. Aridity and drought
 - 4.3.4. Global distribution of rainfall

5. Atmospheric humidity and precipitation

Global atmospheric circulation

- 5.1. Pressure and wind
 - 5.1.1. The pressure and laws of the atmospheric movement
 - 5.1.2. The horizontal movement
 - 5.1.3. Convergence and divergence
 - 5.1.4. Principles of conservation of the atmospheric movement
- 5.2. Global Atmospheric Circulation
 - 5.2.1. Planetary pressure belts
 - 5.2.2. Planetary wind system
 - 5.2.3. Global circulation models

6. Air masses

- 6.1. Barotropic and baroclinic atmosphere
- 6.2. Origin and types of masses of air. Modifications of air masses
- 6.3. Cyclogenesis
 - 6.3.1. Cyclogenesis of the "polar front" and types of fronts
 - 6.3.2. Other phenomena of cyclogenesis: tropical cyclones, Tornadoes, cold drops
- 6.4. Weather maps: analysis and interpretation

7. The climates of the world

- 7.1. The climatic classification of Köppen
- 7.2. Dry climates
- 7.3. Hot and humid climates
- 7.4. Temperate climates
- 7.5. Continental climates
- 7.6. Cold climates

WORKLOAD

ACTIVITY	Hours	% To be attended
Theory classes	30,00	100
Other activities	15,00	100
Classroom practices	15,00	100
Development of group work	10,00	0
Development of individual work	10,00	0
Study and independent work	20,00	0
Preparation of evaluation activities	15,00	0
Preparing lectures	15,00	0
Preparation of practical classes and problem	20,00	0
TOTAL	150,00	

TEACHING METHODOLOGY

Lectures, exercises classes and workshops

EVALUATION

Final examination of theoretical and practical (80%) and continuous assessment (20%).

Continuous assessment exercises and seminars will not be recoverable

In second call, the qualification of the seminars and exercises of continuous evaluation will be kept

ADDENDUM COVID-19

This addendum will only be activated if the health situation requires so and with the prior agreement of the Governing Council

1. Continguts / Contenidos

No se han reducido los contenidos teóricos inicialmente recogidos en la guía docente. Se han reducido los contenidos prácticos sobre inestabilidad atmosférica y movimiento atmosférico (interpretación de mapas del tiempo). Se han seleccionado los necesarios para adquirir las competencias fundamentales de la asignatura (el resto).

2. Volum de treball i planificació temporal de la docència

2. Volumen de trabajo y planificación temporal de la docencia

Se ha reducido el número de horas de clases teórico-prácticas presenciales, mediante su transformación con materiales diversos subidos a través del Aula Virtual. Se ha trasladado una parte de ese tiempo al aprendizaje autónomo paralelo del alumnado. En cuanto a la planificación, se han mantenido estrictamente los horarios de clase, aparte del trabajo personal del estudiante. Se ha modificado la segunda Actividad Complementaria programada (Interpretación de mapas del tiempo)

3. Metodología docente

3. Metodología docente

Sustitución parcial de la impartición de clases presenciales por la subida al Aula Virtual de los materiales de apoyo a la preparación de los contenidos (bibliografía, artículos científicos, solucionarios de pruebas...). La metodología docente se basa en el estudio de estos materiales por parte del estudiante, foros de dudas en horario de clases, y pruebas parciales voluntarias

Sistema de Tutorías: Se mantiene el programa de tutorías virtuales por correo electrónico y por chat privado del Aula Virtual y se emplean otras herramientas del Aula Virtual para atender dudas o debates colectivos (creación de foros).

4. Avaluació

4. Evaluación

Se mantienen los porcentajes de evaluación explicitados en la guía docente original. Se valoran todas las actividades de evaluación continua ya efectuadas de forma presencial u online. En el día y franja horaria estipulada por el calendario académico de exámenes se realizará la última prueba que equivale al porcentaje que se denominaba examen o prueba escrita y que se realizará a través de alguna de las opciones y medios que ofrece el Aula Virtual de la Universitat de València. No se exige nota mínima en cualquiera de las actividades de evaluación, especialmente en la prueba escrita final. Se considerarán en la nota final las calificaciones de las pruebas parciales voluntarias, a modo de evaluación continua,

que podrán eliminar materia en la prueba final.

5. Bibliografia

5. *Bibliografía*

Se ha sustituido la bibliografía recomendada, por la bibliografía y materiales docentes subidos al Aula Virtual.
