## SUMMARY

The urbanization in all its forms is becoming one of the most remarkable processes of the century. For the first time in history, there are more people living in urban areas than in rural. At the time, the city appears as an economic engine of the countries and regions and melting pot of social movements, reformers and revolutionaries of all kinds. In this course the fundamental definitions of contemporary urban spaces are reviewed, analyzing the origin of the city in history, the relationship between different cities to happen systems and urban form. Also studied the different ways in which urban spaces are presented to the world, with focus on three themes: the emergence of new urban forms (megacities, city-regions), unfair cities based on race, gender or the origin and the social movements that have the urban space as a fundamental means of action.

## PREVIOUS KNOWLEDGE

### Relationship to other subjects of the same degree

There are no specified enrollment restrictions with other subjects of the curriculum.

### Other requirements

No prerequisites

## OUTCOMES

### 1318 - Degree in Geography and the Environment

- Skills in analysis and synthesis.
- Comunicación oral y escrita en la lengua propia y conocimiento de una lengua extranjera.
- Capacidad de trabajo individual.
- Capacidad de trabajo en equipos de carácter interdisciplinar.
- Compromiso con valores de igualdad de género, interculturalidad, igualdad de oportunidades y accesibilidad universal de las personas con discapacidad, cultura de la paz y valores democráticos, y solidaridad.
- Aprendizaje autónomo, creatividad, capacidad de iniciativa y espíritu emprendedor. Capacidad de resolver situaciones imprevistas.
- Historia y pensamiento de la disciplina geográfica.
- Geografía humana, económica y social.
- Métodos de información geográfica.
- Metodología y trabajo de campo.
- Dimensiones temporal y espacial en la explicación de los procesos sociales y territoriales y medioambientales.
- Relación y síntesis información territorial transversal.
- Relación del medio natural con la esfera social y humana.
- Diversidad de lugares, regiones y localizaciones y sus relaciones.

## LEARNING OUTCOMES

It is expected that the student is able to interpret urban processes and problems of economic and social area at different scales and to have an effective search, selection and processing of information about the significance of the urban phenomenon in the history and recent processes in urban space. Economic, social and environmental causes and consequences of the diffusion processes of urban and metropolitan fact. Industrialization and urbanization: large stages. Economic and social change: the sprawling city. Urban governance: the limits of the present city. The city as a global actor. Urbanization and urban poverty as a geopolitical challenge.

## DESCRIPTION OF CONTENTS

### 1. The urbanization and the study of urban geography

The complexity of the urban phenomenon and the definitions of the city. The city as an object of multidisciplinary study. Evolution of the study of urban geography. An urbanized world. The population in the cities.

### 2. The origins and the role of the city in history

From the planned cities of antiquity to the pre-industrial city. The industrial city and the birth of urban planning. The post-industrial city. Cities in transition: poverty, inequalities, super-urbanization in Latin America.

### 3. The spatial construction of the city: urbanism

The location of the city. The composition of the morphology of the city. The forms of urban growth: between tradition and utopia. The social actors that build the city.

### 4. The spatial dimension of cities

The city and its area of influence. The functional areas. The role of medium-sized cities as articulators of the territory. The urban network, hierarchy of cities and global system of cities. The expansion of urban space and territorial effects.

### 5. Cities and economic development

Urban growth and development. Models and theories of urban economic growth: Von Thunen, Christaller, and Sorribes. Land rent, the urban real estate market and the construction sector. Housing as an economic and social articulating factor of urban space. Urban systems and economic crises: resilience. Telecommunications and transport as articulators of the city and the system of cities. The economic reconversion of cities: from the industrialization of urban spaces in cities as service spaces. Innovation in cities. The global city.

### 6. The global challenge: The sustainability of cities

Quality of life in cities and living space. SDG 11. The spatial problems of urban growth. The environmental problems of cities. Smart cities or Smart Cities. New Urban Agenda and the 2030 Agenda for Sustainable Development. The Sustainable Urban Mobility Plans (PMUS). Quality of life in cities and living space.

## 7. The social dimension of urban spaces: the right to the city

Revolutionary theories on the role of the city and urban social movements. Social, ethnic or gender division in the city: the concept of spatial injustice. Public services: accessibility and sustainability. Governance and citizen participation Urban policies and city government. The city and fear. Urbanism with a gender perspective. The urban landscape: built city, lived city and perceived city.

## 8. Sources, databases and indicators for the knowledge and diagnosis of cities

The importance of decision making in urban planning and management. The holistic analytical capacity of urban data. The complexity of the sources of information. traditional sources of information. Technological data sources of geographic information and "Big data" in cities. The democratization of urban data: Open data.

## WORKLOAD

ACTIVITY	Hours	% To be attended
Theory classes	30,00	100
Other activities	15,00	100
Classroom practices	15,00	100
Development of individual work	10,00	0
Study and independent work	20,00	0
Readings supplementary material	20,00	0
Preparation of evaluation activities	10,00	0
Preparing lectures	30,00	0
<b>TOTAL</b>	<b>150,00</b>	

## TEACHING METHODOLOGY

The development of the course is divided into two working sessions a week. Some of the issues discussed in theoretical sessions are complemented by documentaries or conferences about related processes and issues . The student will follow complementary activities, both inside and outside the classroom, while they develop the contents of the programm. There will be also have weekly hours for tutoring.

## EVALUATION

An evaluation system that combines ongoing effort during the course and a final written test is proposed. During the development of the course the student will practice three types of activities: reading and classroom discussion of material, group tutoring and workshops (up to 4 points). It also will be a final written test consisting of the development of specific aspects of the programm. The final written test may involve up to five points on the overall rating. For both ratings can be weighted, the student must obtain

at least four points in the final written test. A point will come from complementary activities or readings.
