SUMMARY

The subject *Geography and environment in Africa* studies the environment, the population and economic activities of a continent that is identified with underdevelopment, hunger, poverty, conflict, etc. However, Africa is characterized as territory with large regional differences, with countries, that are highly dependent on a few natural resources and that have a diversified economy; countries which have been integrated into the global economy. The exploitation of their wealth and economic investments from abroad characterize the integration of the continent in the globalization process, with a high environmental cost.

PREVIOUS KNOWLEDGE**Relationship to other subjects of the same degree**

There are no specified enrollment restrictions with other subjects of the curriculum.

Other requirements

The course doesn't present prerequisites. However, students are recommended to review the basic concepts previously studied in following courses: Introduction to Geography and Environment, Introduction to Physical Geography and Introduction to Human Geography, as well as Cartography and GIS courses.

OUTCOMES

1318 - Grado de Geografía y Medio Ambiente

- Have capacity for analysis and synthesis.
- Have oral and written communication skills in one's own language and in a foreign language.
- Be able to work independently.
- Be able to work in interdisciplinary teams.
- Show commitment to the values of gender equality, interculturality, equal opportunities, universal access for people with disabilities, the culture of peace, democratic values and solidarity.
- Show motivation for quality, responsibility and intellectual honesty.
- Learn about regional geographical spaces.
- Learn about geographic information systems.
- Learn about the time and space dimensions in the explanation of social, territorial and environmental processes.
- Be able to relate and synthesise cross-disciplinary territorial information.
- Learn about the diversity of places, regions and locations and their relationships.

LEARNING OUTCOMES

1. Knowledge of African continent's geographical diversity and its position in the global economy.
2. Assessment of social and economic change in Africa.
3. Evaluation of causes and consequences of Africa's environmental problems
4. Enhancing group work, critical analysis and oral and written presentation as well as argumentation.

DESCRIPTION OF CONTENTS

1. States and frontiers in Africa

The first agenda item examines the current territorial organization of the African continent, the recent increase in number of States and kilometer border after the decolonization process, geopolitical fractures, the causes of many national and international conflicts ravaging the continent and causing millions of refugees and displaced persons, which exacerbate environmental problems in many border areas.

2. Natural setting and the state of the environment

The subject deals with the study of the environment in which human activities are being developed, the different natural components of geographic space: the structure of the relief, large morfo-structurals units, climate and biomes, fluvial network. Special attention is devoted to the issue water. Resource availability in quantity and quality is one of the most important challenges facing Africa, and its control is cause of conflicts and tensions. Finally, the dramatic environmental changes are analyzed: Deforestation, soil degradation, water pollution, air pollution and the rapid loss of biodiversity, are serious obstacles to development.

3. Population and migration in Africa

This topic analyzes population dynamics, geographical distribution and composition. In Africa demographic and urban growth has been spectacular, and one of the main problems facing society is the inclusion of millions of young people to working life. African population is characterized by high mobility, with important internal and external migration. For many families, the emigration of one of its members is the solution to the subsistence problems.

4. Recent socioeconomic changes

Economic activities in the current globalization process are discussed. Agriculture remains the main economic sector in many countries. The contribution of the manufacturing industry is modest, largely due to poor transport infrastructure. Meanwhile, extractive industry occupies a very prominent place in Africa's economic growth. The insertion of Africa into the global economy is based on the export of its natural resources, which attracts a large volume of investment and, in most cases, has a negative environmental impact.

WORKLOAD

| ACTIVITY | Hours | % To be attended |
|---------------------------------|---------------|------------------|
| Theory classes | 30,00 | 100 |
| Other activities | 15,00 | 100 |
| Classroom practices | 15,00 | 100 |
| Development of group work | 15,00 | 0 |
| Development of individual work | 15,00 | 0 |
| Study and independent work | 40,00 | 0 |
| Readings supplementary material | 20,00 | 0 |
| TOTAL | 150,00 | |

TEACHING METHODOLOGY

In class the basic content of each issue will be explained and the lecturer will provide information and recommended reading materials that students ought to read and comment. Active learning, selected text commentary, argumentation and critical thinking will be encouraged in classroom

During individual and group tutorials, lecturer and students will try to solve problems and difficulties arising in the learning process and in the implementation of activities.

EVALUATION

The assessment consists of a written test (65% of the final note), and a drill, practice activities and conferences attendance (remaining 35%).

Students must pass the theory exam in order that the results of the activities are taken into account.

Students who fail the course in the first call, keep notes and practical exercises for the second call.
