Code	33954
Name	Food Hygiene
Cycle	Grade
ECTS Credits	4.5
Academic year	2018 - 2019

Study (s)

Degree	Center	Acad. year	Period
1205 - Degree in Human Nutrition and Dietetics	Faculty of Pharmacy and Food Sciences	4	First term
1211 - D.D. in Pharmacy-Human Nutrition and Dietetics	Faculty of Pharmacy and Food Sciences	5	First term

Subject-matter

Degree	Subject-matter	Character
1205 - Degree in Human Nutrition and Dietetics	17 - Food hygiene	Obligatory
1211 - D.D. in Pharmacy-Human Nutrition and Dietetics	1 - Asignaturas obligatorias del PDG Farmacia-Nutrición Humana y Dietética	Obligatory

Coordination

Name	Department
FERRER GARCIA, EMILIA	265 - Prev. Medicine, Public Health, Food Sc., Toxic. and For. Med.
RICO VIDAL, HORTENSIA	275 - Microbiology and Ecology
VALERO ALEIXANDRE, MARIA ADELA	21 - Cellular Biology and Parasitology

SUMMARY

The subject of Food Hygiene is an obligatory subject of the fourth year part of the Degree in Human and Dietetic Nutrition, imparted at the Faculty of Pharmacy of University of Valencia. This subject, according to the current curriculum is awarded a total of 4.5 ECTS credits, imparted on a six-month basis.

Fundamental aims are:

- i) To provide the necessary knowledge to students in food safety so that they know the principles and common responsibilities to achieve a high level of protection of life and health in humans;
- ii) To protect consumer interests applying correct practices in the food trade;
- iii) Bearing in mind, when applicable, the well-being of animals, phytosanitary aspects and the environment.

PREVIOUS KNOWLEDGE

Relationship to other subjects of the same degree

There are no specified enrollment restrictions with other subjects of the curriculum.

Other requirements

In order to participate, basic concepts of food Microbiology, food Parasitology and food Toxicology are required and it is anticipated that the students have already acquired this knowledge. The above-mentioned concepts form part of the contents of the subjects imparted during previous courses along the Degree.

OUTCOMES

1205 - Degree in Human Nutrition and Dietetics

- Know, judge and know how to use and apply the sources of information related to nutrition, food, lifestyles and health.
- Recognise one's own limitations and the need to maintain and update professional competence, with particular emphasis on independent and lifelong learning of new facts, products and techniques in the field of nutrition and food, and on motivation for quality.
- Realizar la comunicación de manera efectiva, tanto de forma oral como escrita, con las personas, los profesionales de la salud o la industria y los medios de comunicación, sabiendo utilizar las tecnologías de la información y la comunicación especialmente las relacionadas con nutrición y hábitos de vida.
- Adquirir la formación básica para la actividad investigadora, siendo capaces de formular hipótesis, recoger e interpretar la información para la resolución de problemas siguiendo el método científico, y comprendiendo la importancia y las limitaciones del pensamiento científico en materia sanitaria y nutricional.
- Desarrollar la profesión con respeto a otros profesionales de la salud, adquiriendo habilidades para trabajar en equipo.

- Know the basics of hygiene in food, processes and products.
- Know the hygiene and preventive measures applicable to the major alterations in food products caused by toxic substances and chemicals originated during food processing.
- Know the hygiene and preventive measures against major parasite-induced alterations in food.
- Know the hygiene and preventive measures against major microorganism-induced alterations in food.
- Understand the use of guides to good hygiene practice as a tool to ensure the proper handling of food.
- Know and interpret the results obtained in the hazard analysis and critical control points (HACCP).
- Conocer y manejar las fuentes de información básicas relacionadas con la Higiene alimentaria.

LEARNING OUTCOMES

- Knowledge of the basic concepts of food hygiene, processes and products
- Knowledge of hygienic and preventive measures of the principal alterations of food produced by toxic substances, chemical products in the course of food processing
- Knowledge of hygienic and preventive measures of the principal alterations of food caused by parasites
- Knowledge of the hygienic and preventive measures of the principal alterations of food caused by microorganisms;
- Knowledge of the guidelines on the correct practices of hygiene as a tool to assure correct food handling;
- Knowledge and interpretation of the results obtained in the analysis of hazard analysis and critical control points (HACCP)
- Knowing and handling the basic sources of information related to food hygiene;
- Aptitude to prepare and present a project in public in a clear and precise manner;
- Aptitude to establish good relations with other members of the group and team-work;
- Awareness of the importance of active participation in one's own intellectual and scientific development;
- To have a receptive attitude, understanding the meaning of the knowledge transmitted.

DESCRIPTION OF CONTENTS

1. Introduction to food hygiene

Definition. Concepts. Spanish Agency of food safety and nutrition (AESAN). Food Codex. Food Security: Definition. Control of microbiological, parasitological and toxicological food safety. Instruments of food safety management: good manufacturing practices (GMP), good hygiene practices (GHP) and hazard analysis and critical control points (HACCP). Principles and definitions of hygiene and traceability requirements (HATR) and hazard analysis and critical control points (HACCP). Directives for its application. Analysis of hazards. Control of critical points and limits (physical and chemical parameters measurable in real time). Quality management. Training. Control and auditing.

2. Specific quality regulation in the alimentary sector

Definitions contemplated in food legislation. General and specific principles. Voluntary standards. Standards required by consumers

3. Cleanliness and disinfection

Definitions. Types of dirt. Process of cleanliness. Waste. Characteristics of the chemical products used in food establishments. Elements of cleanliness: detergents and disinfectants. Desirable properties of a detergent. Types of detergents. Desirable properties of a disinfectant. Types of disinfectants. Cleanliness and effective disinfection scheme. Heat application cleanliness, dry cleaning or in situ (CIP). Mechanized cleanliness. Cleanliness with foam. Evaluation of the cleanliness and disinfection scheme. Environmental sampling techniques. Sampling techniques of microorganisms on surfaces. Control and confirmation of the efficiency of cleanliness and disinfection

4. Food handlers

Education in food hygiene. Initial and continued training of food handlers. Personal hygiene of food handlers. Health and personal hygiene. Good and bad work practices. Workwear

5. Facilities and equipment

Facilities: hygienic foundations of industrial design and food establishments. Choice of materials and construction. Areas of work and gadgets. Equipment: general hygienic characteristics of equipment in food processing establishments and industry. Installation and maintenance

6. Preparation and handling of food

Food processing. Cross-contamination. Disinfection of vegetables. Non suitable food for human consumption. Cooking methods. Boiling and reheating. Temperature. Cooking systems. Keeping heated food. Systems of heat treatment

7. Plague control

Rodents. Treatment against rodents. Insects: flies, cockroaches, ants and others. Treatment against insects. Control and surveillance. Taking control measures

8. Control of pathogens and toxic substances

Control of bacteria, viruses, parasites and toxic substances. Control, surveillance and taking measures

9. (Perishable) goods

(Perishable) goods. Suppliers. Sanitary records of industries. Transport and receipt of (perishable) goods. Control, surveillance, irregularities and taking control measures. Storage of goods. Packing and wrapping. Dry storage, refrigeration and freezing. Defrosting of food

10. Drinking water

Drinking water. Hazards and control. Periodic analyses. Legionella: control, surveillance and taking control measures. Hyperchloration

11. Food management in emergencies

Food management in emergencies. Measures to be followed in an emergency (of fire, water being cut-off, power cuts, floods etc.) to guarantee conservation conditions of goods. Food scares. Procedures to be followed in case of food poisoning. Declaration of food scares

12. LABORATORY PRACTICE SESSIONS

1. CONTROL OF DISINFECTANT IN WATER: Determination of active chlorine (total residual chlorine) in water, by two methods:

1.1. Orthotolidine method.

1.2. Titrimetric determination by n, n-diethyl-pfenilendiamonium (DPD) reagent.

2. HAZARD ANALYSIS AND CRITICAL CONTROL POINTS:

2.1. Set HACCP system from a stage of the manufacture food.

2.2. Set HACCP system in various stages of the manufacture food.

3.DETECTION OF TRICHINELLA IN THE MEATS: METHODS OF REFERENCE OF THE EU

4.ANALYSIS OF STAPHYLOCOCCUS AUREUS CARRIERS

5.MICROBIOLOGICAL ANALYSIS OF SURFACES

**WORKLOAD**

ACTIVITY	Hours	% To be attended
Theory classes	24,00	100
Laboratory practices	15,00	100
Seminars	2,00	100
Tutorials	2,00	100
Development of group work	8,00	0
Development of individual work	1,00	0
Study and independent work	7,00	0
Readings supplementary material	3,00	0
Preparation of evaluation activities	4,50	0
Preparing lectures	39,00	0
Preparation of practical classes and problem	5,00	0
TOTAL	110,50	

TEACHING METHODOLOGY

The development of the subject will be structured in the following way:

Theoretical classes will Include 2 weekly hours in which the teacher provides a global overview of the topic along with the necessary information to understand the contents of the subject. In the above-mentioned classes, the student is induced to search incidental or complementary information, orientating him/her in the use of necessary bibliographical sources. It is recommendable for students to check previously the material that the teacher leaves in the virtual classroom as follow-up of the class.

Specialized tutorials in small groups. The purpose is orienting students and determining the follow-up of the course. It is a suitable way for the students to raise doubts or questions arising from the development of the curriculum.

Practical laboratory classes. They will be imparted in small groups, attendance is obligatory. The work of the student is monitored step by step, to achieve the required manual skills in the laboratory and solve problems by him-/herself.

Seminars/projects. A project will have to be carried out in groups on a topic proposed by the teacher to be presented later to the rest of the class and to generate a posterior debate. A résumé will have to be delivered in writing before the presentation to the class as a whole. The group is personally and regularly supervised by the teacher, who provides orientation when looking for bibliographical sources and in the critical analysis of the information found in the above-mentioned sources. The teacher advises on the general presentation of the project, thus promoting the students' capacity to work, synthesize and research

EVALUATION

Continuous assessment of knowledge, competence and skills will take place along the course.

Seminars attendance will be obligatory and contributes 10% to the final mark. The lack of participation will be negatively reflected in the final mark. Failure to attend the seminars will result in the rating of 0 in this section (seminars: 10% of the total mark).

The evaluation of the practical classes will contribute 20 % to the final mark in. Attendance is indispensable to pass the subject, and a report with the methodology and results obtained will have presented at the end. To pass the subject, a minimum of 40 % of the maximum mark of this part in the final exam will have to be obtained.

70 % of the final mark will be obtained in the examination corresponding to theoretical knowledge. To pass the subject a qualification equal to/above 4.0 points out of ten in the content of the theoretical examination will have to be obtained.

Those students who do not pass the subject in first time, the corresponding mark of seminars will kept until the second summons.
