

**COURSE DATA****Data Subject**

Code	33978
Name	Statistics
Cycle	Grade
ECTS Credits	6.0
Academic year	2022 - 2023

Study (s)

Degree	Center	Acad. Period
1103 - Degree in Food Science and Technology	Faculty of Pharmacy	1 Second term

Subject-matter

Degree	Subject-matter	Character
1103 - Degree in Food Science and Technology	6 - Statistics	Basic Training

Coordination

Name	Department
SANTONJA GOMEZ, FRANCISCO JOSE	130 - Statistics and Operational Research

SUMMARY

This course aims to provide students with the tools and basic concepts of Statistics which are necessary to state statistical hypotheses, recognize simple probabilistic models, analyse data obtained by either direct observation of the environment or as a result of controlled experiments in laboratories, and make decisions based on the conclusions drawn from this analysis. An additional purpose of this course is to motivate students in the study and application of Statistics, using the proper tools to solve real problems.

PREVIOUS KNOWLEDGE

Relationship to other subjects of the same degree

There are no specified enrollment restrictions with other subjects of the curriculum.

Other requirements

There are no recommendations as it is an introductory course.

OUTCOMES

1103 - Degree in Food Science and Technology

- Describe and synthesise the dataset observed in the experiment.
- Analyse the data observed using a statistical package.
- Interpret the results provided by statistical packages.
- Prepare and submit a report of the experimental study conducted.
- Be familiar with statistics applied to health sciences.

LEARNING OUTCOMES

- Properly describe and synthesize the data set obtained from experiments.
- Analyze the observed data using appropriate statistical software.
- Correctly interpret the results provided by the software used.
- Develop and submit a report of the study.

DESCRIPTION OF CONTENTS

1. Introduction to Statistics and Exploratory Data Analysis

Introduction to Statistics

Sample description.

Population description: Introduction to Probability

2. Unit 2: Statistical analysis of a variable

Inference on proportions
Inference on a population mean

3. Unit 3: Statistical analysis of more than one variable

Comparison of two population means
Comparison of more than two population means
Comparison of categorical variables

WORKLOAD

ACTIVITY	Hours	% To be attended
Theory classes	45,00	100
Seminars	10,00	100
Tutorials	2,00	100
Development of group work	10,00	0
Study and independent work	20,00	0
Preparation of evaluation activities	20,00	0
Preparing lectures	20,00	0
Preparation of practical classes and problem	20,00	0
TOTAL	147,00	

TEACHING METHODOLOGY

Theory classes will be devoted to develop the agenda and raise problems whose solution requires the methodology corresponding to each subject. We will introduce the appropriate statistical technique and apply it to solve proposed problems using statistical software. For the preparation of the course the student will have a collection of proposed problems, separated by subjects, which they will have to resolve on their own.

The practical sessions will take place in a computer room and will be synchronized with the theory; they will allow the student to solve problems by applying the statistical procedures

EVALUATION

The knowledge acquired both in theory and practical sessions will be evaluated together, by means of an exam which may require the interpretation of results presented in the standard statistical software format used throughout the course. This evaluation will represent the 70% of the final grade. The remaining 30% of the final grade will come from work evaluated throughout the course (20%) and seminars (10%). To pass the course you must have at least a grade of 4/10 both in final grade and practical works

Practical work evaluated throughout the course is done in group and in the computer lab so it is not recoverable
