

**COURSE DATA****Data Subject**

<b>Code</b>	34747
<b>Name</b>	Physics II
<b>Cycle</b>	Grade
<b>ECTS Credits</b>	6.0
<b>Academic year</b>	2020 - 2021

**Study (s)**

<b>Degree</b>	<b>Center</b>	<b>Acad. Period</b>
1401 - Degree in Chemical Engineering	School of Engineering	2 First term

**Subject-matter**

<b>Degree</b>	<b>Subject-matter</b>	<b>Character</b>
1401 - Degree in Chemical Engineering	2 - Physics	Basic Training

**Coordination**

<b>Name</b>	<b>Department</b>
AGOURAM OUHTIT, SAID	175 - Applied Physics and Electromagnetism
FERRER ROCA, CHANTAL MARIA	175 - Applied Physics and Electromagnetism
ROLDAN GARCIA, CLODOALDO	175 - Applied Physics and Electromagnetism

**SUMMARY**

Physics is a fundamental subject that is present in all science and engineering degrees. Specifically Physics II is taught in the second semester of the first course. It consists of a part of theory and problems and a laboratory practice.

The course provides the basis of wave mechanics and electromagnetic phenomena from the phenomenological point of view. It begins with the study of mechanical waves with special attention to sound. Here are the basic principles of electromagnetism, studying electrostatic and magnetostatic fields in vacuum and matter, then studies the behavior of time-varying fields, and the course finishes studying the basic characteristics of electromagnetic waves .

The course contents are: mechanical and acoustic waves. Electricity and magnetism. Electromagnetic fields and electromagnetic waves, which are divided into thematic units listed in paragraph 6.

The main objective of this course is to provide students with basic knowledge regarding the mechanical waves and electromagnetism (including specifically the study of electromagnetic waves) that help you understand and explain the phenomena of engineering related to these areas.

Moreover, the course aims to provide support for physical knowledge in other subjects that may require the degree.

Observations: The theory classes will be taught in Spanish and practical classes as stated in the course sheet available on the website of the degree.

## PREVIOUS KNOWLEDGE

### Relationship to other subjects of the same degree

There are no specified enrollment restrictions with other subjects of the curriculum.

### Other requirements

No se han especificado restricciones de matrícula con otras asignaturas del plan de estudios.

## OUTCOMES

### 1401 - Degree in Chemical Engineering

- G3 - Knowledge of basic and technological subjects that allows students to learn new methods and theories and provides them with versatility to adapt to new situations.
- G4 - Ability to solve problems with initiative, decision-making skills, creativity and critical reasoning and to communicate and transmit knowledge, abilities and skills in the field of industrial engineering.
- B2 - Understanding and mastery of the basic concepts of the general laws of mechanics, thermodynamics, fields, waves and electromagnetism and of their application to solve engineering problems.

## LEARNING OUTCOMES

### Learning outcomes:

- Be able to evaluate clearly the orders of magnitude and relative importance of different causes involved in a physical phenomenon. (G4, B2).
- Know and understand the fundamentals of physics and mathematical background for the formulation, and most important applications in industry or daily life. (G3, B2).
- Solve problems, being able to identify the essential elements and perform the required approximations. (G3, G4).
- Be able to delve into the different branches of physics from the basic concepts acquired in this area, integrating mathematical formalisms and more complex concepts.(B2).
- Be able to communicate information, ideas, problems and solutions through argumentation and reasoning. (G4).
- Understanding and mastery of basic concepts and electromagnetic wave and its application to solving

problems of engineering. (G4, B2).

- Knowledge of principles and technologies that enable them to learn new methods, and to adapt to new situations. Acquire the necessary training in electromagnetism and waves to support other areas of engineering. (G3, G4, B2).

- Ability to solve problems, apply knowledge creatively and communicate knowledge in the field of engineering.(G4).

### **Skills to be acquired:**

The student should be able to:

- Identify and electromagnetic wave phenomena.
- Know the principles of operation of devices and systems based on electromagnetic or wave phenomena.
- Know how to evaluate the order of magnitude of the phenomena studied devices.
- Be able to apply their knowledge to different technological branches, specifically in the field of telecommunications engineering.
- Know how to organize and communicate knowledge and information.

In addition to the specific objectives mentioned above, the course will encourage the development of several generic skills, among which include:

- Develop the ability to identify problems and devise strategies for their resolution.
- Develop the ability to plan and organize their own learning based on individual work, from the literature and other sources.
- Develop the ability to work in groups.
- Develop the ability to argue from rational and scientific criteria.
- Develop the ability to track their learning from the issues and problems done in class.
- Develop the capacity to develop a text based on suggested reading and written in an understandable and organized.
- Assess the relative importance of different causes involved in a phenomenon.
- Identify the essential elements of a complex situation, make the necessary approaches to construct simplified models that describe and to understand their behavior and in other situations.

## **DESCRIPTION OF CONTENTS**

### **1. Wave motion.**

Wave phenomena. Wave Equation. Propagation speed. Harmonic solution. Energy and intensity of a wave.

### **2. Acoustics**

Pressure waves. The human ear. Attenuation and absorption.

### **3. Electrostatic field in vacuum**

Coulomb's law. Electric field. Gauss theorem. Potential. Work.

### **4. Electrostatic field in matter**

Electric dipoles. Polarization of the materials. Permittivity. Driver charged in equilibrium. Electricity, resistivity.

### **5. Static magnetic field in vacuum**

Ampère's law. Magnetic Field. Biot-Savart Law.

### **6. Magnetostatic fiels in matter**

Magnetic dipoles. Magnetization of materials. Relative magnetic permeability. Magnetic properties of matter.

### **7. Fields that depend on time**

Faraday's law of induction. Inductive devices. Displacement current.

### **8. Electromagnetic waves**

Wave equation. Harmonic solution. Electromagnetic spectrum. Poynting.

### **9. Physics II. Laboratory**

Speed and attenuation of electromagnetic waves. Interference of electromagnetic waves. Magnetic fields. Electromagnetic induction.

**WORKLOAD**

ACTIVITY	Hours	% To be attended
Classroom practices	25,00	100
Theory classes	25,00	100
Laboratory practices	10,00	100
Development of individual work	4,00	0
Study and independent work	15,00	0
Readings supplementary material	2,00	0
Preparation of evaluation activities	8,00	0
Preparing lectures	9,00	0
Preparation of practical classes and problem	17,00	0
Resolution of case studies	33,00	0
Resolution of online questionnaires	2,00	0
<b>TOTAL</b>	<b>150,00</b>	

**TEACHING METHODOLOGY**

**Classroom work:** classes of theory, problems and laboratory (Competences G3, G4, B2).

**Home work:** preparation of theory classes, problem solving, job preparation and presentation of results. (Competencies G3, G4, B2).

**Individual or group tutorial classes.** (Competencies G3, G4, B2)

**EVALUATION**

To evaluate the students learning, next criteria will be applied:

A) 15 points: participation in classes through the evaluation of specific tasks (problems, questionnaires, etc.) proposed to the students.

B) 65 points: average of two exams, a partial exam (that will be eliminatory. The minimum grade is 5/10) and final exam. The final and partial exams consisting of short theoretical questions and problems. The minimum to average with the other contributions will be 26 points out of 65 points. The final exam will consist of two parts and the minimum grade in each part is 4/10.

C) 20 points: evaluation of the laboratory work. The laboratory can be assessed from specific reports which certify the knowledge acquired by students.. These reports must include experimental measurement data and the answers to the proposed questions. Attendance at laboratory classes is mandatory and not recovered. The minimum to average with the other contributions will be 8 points out of 20 points.

The subject is passed with a final score (A+B+C) greater or equal to 50 points out of 100.

In any case, the evaluation system will be governed by the regulations of Evaluation and Qualification of the University of Valencia for Degrees and Masters (<http://links.uv.es/7S40pjF>).

## ADDENDUM COVID-19

**This addendum will only be activated if the health situation requires so and with the prior agreement of the Governing Council**

### Contents

The contents initially established in the Course Guide are maintained.

### Workload and planning of teaching

#### *Workload*

The activities described in the Course Guide with their time dedication are maintained.

#### *Planning of teaching*

The resources used in the theoretical and practical sessions allow to continue with the planning of teaching both in days and in scheduled, both of if is in-person class or not.

### Teaching methodology

In the theoretical and practical classes, there will be the maximum in-person class sessions, always respecting the sanitary restrictions that limit the classroom capacity to 50% of their usual occupation. Depending on the classroom capacity and the number of students enrolled, it could be necessary to distribute the students into two groups. If this situation occurs, each group will assist to the in-person class sessions by rotating shifts, thus ensuring compliance with the limitation of classroom capacity. The rotation system will be established once the enrollment results is known, guaranteeing, in any case, that the percentage of in-person classes for all the students enrolled in the subject is the same. For non-in-person theoretical and practical classes, preferably, there will be a synchronous online teaching model, as

long as compatibility with other scheduled activities allows. Online teaching will be carried out by synchronous videoconference respecting the timetable, or, if not possible, asynchronous.

The scheduled laboratory practice sessions will be in-person classes.

Once the enrollment results and the availability of spaces are known, the Comisión Académica de la Titulación will approve the Teaching Model of the Degree and its adaptation to each subject, establishing the specific conditions in which the teaching will be developed.

If there is a closure of the facilities for sanitary reasons that totally or partially affects the classes, these will be replaced by non-person sessions following the established timetable.

### **Evaluación**

The evaluation system described in the Course Guide in which the activities have been specified as well as their contribution to the final grade of the subject is maintained.

If there is a closure of the facilities for sanitary reasons that affect the development of any face-to-face evaluable activity, it will be replaced by a test/activity of a similar nature that will be carried out in virtual mode using the computer tools licensed by the University of Valencia. The contribution of each evaluable activity to the final grade of the course will remain unchanged, as established in this guide.

### **References**

The recommended references in the Course Guide is maintained, since they are available.
