

**COURSE DATA****Data Subject**

Code	34787
Name	Mathematics II
Cycle	Grade
ECTS Credits	6.0
Academic year	2022 - 2023

Study (s)

Degree	Center	Acad. year	Period
1402 - Degree in Telecommunications Electronic Engineering	School of Engineering	1	Second term

Subject-matter

Degree	Subject-matter	Character
1402 - Degree in Telecommunications Electronic Engineering	1 - Mathematics	Basic Training

Coordination

Name	Department
CRESPO GARCIA, RAFAEL	15 - Mathematical Analysis

SUMMARY

This subject develops some usual parts of Mathematical Analysis: Differential and integral Calculus of several variables, ordinary differential equations with the Laplace transform, complex functions and Fourier series as well as the Fourier transform for periodic functions.

It is addressed to engineering students, so that the contents have been carefully chosen according to the specific requirements of the corresponding subjects in which they are applied. Always keeping a coherent order in the presentation and development of the concepts to be introduced.

PREVIOUS KNOWLEDGE

Relationship to other subjects of the same degree

There are no specified enrollment restrictions with other subjects of the curriculum.

Other requirements

It is convenient that the student knows the concepts explained in the subject Matemáticas I delivered in the first semester.

OUTCOMES

1402 - Degree in Telecommunications Electronic Engineering

- G3 - Acquisition of the knowledge of the basic and technological subjects that allows students to learn new methods and theories and endows them with the versatility to adapt to new situations.
- B1 - Ability to solve any mathematical problems that may arise in engineering. Ability to apply knowledge of: linear algebra, geometry, differential geometry, differential and integral calculus, differential equations and partial derivatives, numerical methods, numerical algorithms, statistics and optimization.
- Capacidad de resolver problemas con iniciativa, toma de decisiones, creatividad, razonamiento crítico y de comunicar y transmitir conocimientos, habilidades y destrezas en el campo de la Ingeniería Industrial.

LEARNING OUTCOMES

This subject allows the acquisition of the following learning skills:

- Comprehension and knowledge of basic Mathematics concepts
- Engineering problem solving by using advanced mathematical tools
- Be able to understand the mathematical problems that may arise in engineering
- Structure the resolution of engineering problems in a mathematical form
- Modelize physical phenomena by means of mathematical tasks
- Interpretation of the mathematical results when applied to Physics

As a complement of the former results, this subject also allows to acquire the following skills:

- Understand the concept of partial derivative, as well as the use of the chain rule in order to calculate derivatives of compositions and implicit functions
- Know the concepts of double and triple integral and their application in calculating plane areas and three-dimensional volumes
- Knowledge of the main methods of resolution of ordinary differential equations
- Know how to deal with numerical series as well as power series which can be used to expand complex functions
- Represent functions in a frequency domain by means of Fourier series and using the Fourier transform
- Correct exposition (both, written and oral) of scientific material
- Logic and critical reasoning

---Facility to ask whatever has not been understood at an expert dissertation
---Discover connections with other disciplines

DESCRIPTION OF CONTENTS

1. Differential calculus of functions of several variables.

Partial derivatives, directional derivatives, derivative of a composition, implicit derivatives.

2. Integrals in several variables

Integrals of functions in two and three variables, Integration by change of variables, Applications to calculus of plane areas and volumes.

3. Ordinary differential equations

Separable variables equations, linear equations of the first order, linear equations of higher order with constant coefficients, application of the Laplace transform in the solving of linear equations.

4. Functions of a complex variable.

Functions of a complex variable, elementary complex functions, complex derivatives, power series, power series expansions of complex functions.

5. Fourier series and transform

Periodic functions, Fourier series in trigonometric and exponential form, representing periodic functions by means of Fourier series, Fourier transform and its properties.

WORKLOAD

ACTIVITY	Hours	% To be attended
Theory classes	30,00	100
Classroom practices	20,00	100
Laboratory practices	10,00	100
Study and independent work	15,00	0
Preparation of evaluation activities	30,00	0
Preparing lectures	15,00	0
Preparation of practical classes and problem	30,00	0
TOTAL	150,00	

TEACHING METHODOLOGY

It is based upon the following learning strategies:

- a) Theory lectures
- b) Interactive activities: Mostly personal learning from problema solving

Theory activities: Lecture attendance

Practical activities: Problem solving

Laboratory: Work in computer rooms

EVALUATION

The evaluation of the subject will be carried out according to:

- A final exam. The weight of this will be a 70 per cent of the final grade.
- Continuous evaluation. This consists in either some tasks for the student or the realization of periodical tests. The weight of this part will be a 20 per cent.
- The work developed at the computer lab will have a weight of a 10 per cent.
