

**COURSE DATA****Data Subject**

Code	34801
Name	Fundamentals of Computer networks
Cycle	Grade
ECTS Credits	6.0
Academic year	2020 - 2021

Study (s)

Degree	Center	Acad. year	Period
1402 - Degree in Telecommunications Electronic Engineering	School of Engineering	2	First term

Subject-matter

Degree	Subject-matter	Character
1402 - Degree in Telecommunications Electronic Engineering	11 - Networks	Obligatory

Coordination

Name	Department
SORIANO ASENSI, ANTONIO	240 - Computer Science

SUMMARY

The course Fundamentals of Computer Networks is framed within a subject group of networks. This is the most basic course focusing on network fundamentals necessary for subsequent courses that delve into network architecture and planning networks.

The course of 6 credits will correspond to the 1 st semester of the 2 nd year.

The course has been designed with a methodology adapted to the new European Higher Education Area (EHEA), and aims to focus the student learning. This method improves student involvement and supports its assessment on an ongoing basis, reinforcing and complementing the knowledge acquired in class master.

The overall objectives are to cover in detail the following contents: interconnection models of computers, infrastructure physical network; layer data link layer, medium access layer; network layer, transport

protocols.

PREVIOUS KNOWLEDGE

Relationship to other subjects of the same degree

There are no specified enrollment restrictions with other subjects of the curriculum.

Other requirements

Being a second-year course, it is assumed that students already have basic knowledge in the field of engineering and have developed skills to solve problems. Also it is expected that students have learned teamwork dynamics and skills.

More specifically, it is expected that students have knowledge of binary and hexadecimal encoding, binary arithmetic and fundamentals of electronic circuits, from the matter Computing.

COMPETENCES (RD 1393/2007) // LEARNING OUTCOMES (RD 822/2021)

1402 - Degree in Telecommunications Electronic Engineering

- G3 - Acquisition of the knowledge of the basic and technological subjects that allows students to learn new methods and theories and endows them with the versatility to adapt to new situations.
- G4 - Ability to solve problems with initiative, decision-making and creativity, and to communicate and transmit knowledge, abilities and skills, understanding the ethical and professional responsibility of the activity of a telecommunications technical engineer.
- G5 - Knowledge to carry out measurements, calculations, assessments, evaluations, loss adjustments, studies, reports, task planning, and other analogous work in the specific field of telecommunications.
- G6 - Ability in the handling of specifications, regulations and norms of compulsory compliance.
- R6 - Ability to conceive, deploy, organize and manage telecommunications networks, systems, services and infrastructures in residential (home, urban and digital communities), business and institutional contexts, as well as understanding their economic and social impact.
- R12 - Understand and use the concepts of network architecture, protocols and communications interfaces.
- R13 - Ability to differentiate the concepts of access and transport networks, circuit and packet switching networks, fixed and mobile networks, as well as distributed network systems and applications, voice, data, audio, video, interactive and multimedia services.
- R14 - Understand the interconnection and routing methods of network, as well as the fundamentals of planning, sizing networks according to traffic parameters.

LEARNING OUTCOMES (RD 1393/2007) // NO CONTENT (RD 822/2021)

The student should acquire the following skills:

- Identify the most important technological applications in the social environment.
- Organize the work and put into practice in a group of people.

The student should be able to:

- Design a data network with integration of different technologies with different sizes (local, metropolitan, wide area), using both public and private addressing.
- Set up the necessary devices (switches and routers) for the operation of a network and know how to administer the minimum services to be deployed.
- Ability to specify rules to write a specification for the deployment of a network.

DESCRIPTION OF CONTENTS

1. Introduction

- Interconnection networking models:

Introduction

OSI, TCP / IP and hybrid models

Definition of protocol and PDU

Basic examples: MAC address, protocol ARP, IP, mask and gateway

Theory 2 (Face) 3 (No Face)

Problems 1 (Face) 1,5 (Face)

2. Physical network modeling

- Physical infrastructure of the network:

Introduction

Transmission media. Classification and categories

Characterization of the media. Attenuation. Crosstalk. Band width

Structured Cabling Standards

- Media Access Layer:

Introduction

Philosophy of shared access
CSMA algorithms: CSMA / CD, CSMA / CA
IEEE 802.3, 802.11
Switches. Operation.
Spanning Tree Algorithm and Link Aggregation
The concept of VLANs
Trunk interfaces (IEEE 802.1q)

- Layer Data link layer:
Introduction
Definition of frame
Overview of link layer protocols
Study checksum and CRC
PPP and HDLC

Theory 14 (Presencial) 21 (No Presencial)
Problems 5 (Presencial) 7,5 (No Presencial)

3. Logical modeling of the network

- Network Layer
Introduction
IP protocol. Headers. IPv4, IPv6
IP addressing
VLSM and summarization technique
Operation of the router. Routing tables
Fragmentation
Routing algorithms: distance vector and link state
Routing protocols internally and externally

- Transport Layer
Introduction
Port concept, process
Basics of TCP and UDP
Concept of NAT: static, dynamic and extended

Theory 14 (Face) 21 (No Face)
Problems 4 (Face) 6 (No Face)

**WORKLOAD**

ACTIVITY	Hours	% To be attended
Theory classes	30,00	100
Laboratory practices	20,00	100
Classroom practices	10,00	100
Development of group work	15,00	0
Development of individual work	3,00	0
Study and independent work	12,00	0
Readings supplementary material	12,00	0
Preparation of evaluation activities	12,00	0
Preparing lectures	15,00	0
Preparation of practical classes and problem	15,00	0
Resolution of online questionnaires	6,00	0
TOTAL	150,00	

TEACHING METHODOLOGY

The training activities are conducted in accordance with the following distribution:

40% of the hours of ECTS credits (1 credit is 25 hours) will go to the following sessions:

- Activities theory.

Description: The lectures will develop the issues by providing a global and inclusive vision, analyzing in detail the key issues and more complex, encouraging at all times, participation / student.

- Practical activities.

Description: Complementing theoretical activities in order to apply the basics and expand the knowledge and experience to be acquired in the course of the work proposed. They include the following types of classroom activities: Classes of problems and issues in classroom discussion sessions and problem-solving exercises and previously worked by students laboratory practice oral presentations, conferences, tutorials scheduled (individualized or group). Laboratory practices will be mandatory and not retrievable.

- Evaluation.

Description: Implementation of individual evaluation questionnaires in the classroom with the presence of teachers.

60% of the hours of ECTS (25 hours per ECTS) will be devoted to the following non-contact activities:

- Work in small groups.

Description: Realization, by small groups of students (2-4) of work, issues, problems outside the classroom. This work complements the work and encourages individual ability to integrate into working groups.

- Working staff / student.

Description: Realization (outside the classroom) of monographs, literature search directed, issues and problems as well as the preparation of classes and exams (study). This is done individually and tries to promote self-employment.

The platform of e-learning (virtual classroom) of the University of Valencia will be used in support of communication with students. Through it you will have access to course materials used in class as well as solve problems and exercises.

EVALUATION

The course will be evaluated as follows, in Continuous Evaluation:

1) Theoretical (60%)

- Final written exam (30%, FINAL)

- Realization of on-line questionnaires through the semester (20%)

- Written test of short duration (10%, PARTIAL)

2) Laboratory (30%)

- Attendance, preparation (brief summary, notes, etc) and conduct of the practice being evaluated in the same laboratory (15%)
- Test and/or short questions made on the final exam (15%, EXAM-LAB)

3) Creation and presentation of work and exercises proposed by the teacher (10%) with the following methods:

- Objective test, consisting of one or more tests that consist of both theoretical and practical issues as problems.
- Assessment of practical activities from the preparation of papers / reports and / or oral presentations.
- Continuous assessment of each student based on participation and involvement of the students in the teaching-learning process, taking into account regular attendance provided onsite activities and resolution of issues and problems raised.

In order to pass the course will be necessary the fulfillment of all these requirements:

- Average mark equal or higher than 5.
- FINAL exam must be graded at least with 4.
- EXAM-LAB must be graded at least with 3.

In case you fail on first call, the grades can be saved till second call, except in the case you take again the corresponding test. On second call, both the FINAL and PARTIAL are evaluated together with a total weight of 40%. In second exam official announcement, it is also required to obtain mark equal or greater than 3 in TEST-LAB. On second call, it will still be necessary to fulfill the same minimum and average grade requirements as on first call.

Homeworks are compulsory. In case they have been done in a group, all the members should appear in the report submitted in “aulavirtual” or in paper if it was the case. Unless otherwise stated, all documents submitted in aulavirtual will be in pdf format.

ADDENDUM COVID-19

This addendum will only be activated if the health situation requires so and with the prior agreement of the Governing Council

In the event that it is not possible to take the PARCIAL test in person, the grade obtained in the on-line tests carried out through the course will have a weight of 30% on the global mark of the course.

In the event that it is not possible to take the FINAL test in person, it will be replaced by three short on-line tests.

TEST-TEORIA test and/or short answer on-line questionnaire with questions related to the theoretical contents of the course.

TEST-PROBLEMAS test and/or short answer on-line questionnaire with questions related to the problems contents of the course.

PROBLEMAS resolution of two problems. Students must send a document in pdf format with their solution to aula virtual before the end of the task. Students will send to aula virtual a short video or spoken presentation of less than 3 minutes per problem explaining the solution they propose.

In the event of a closure of the facilities due to the health situation that totally or partially affects the classes of the subject, these will be replaced by non-presential sessions following the established schedules. If the closure affects any presential assessment test of the subject, it will be replaced by a test of a similar nature that will be carried out in virtual mode through the tools with institutional support from the University of Valencia. The percentages of each evaluation test will remain unchanged, as established by this guide.
