

**COURSE DATA****Data Subject**

Code	34811
Name	Measurement Equipments and Systems
Cycle	Grade
ECTS Credits	6.0
Academic year	2019 - 2020

Study (s)

Degree	Center	Acad. year	Period
1402 - Degree in Telecommunications Electronic Engineering	School of Engineering	3	Second term

Subject-matter

Degree	Subject-matter	Character
1402 - Degree in Telecommunications Electronic Engineering	15 - Electronic instrumentation, equipment and products	Obligatory

Coordination

Name	Department
CASANS BERGA, SILVIA	242 - Electronic Engineering
NAVARRO ANTON, ASUNCION EDITH	242 - Electronic Engineering

SUMMARY

The purpose of this course is to describe the acquisition systems and signal distribution, hardware and software that configures a virtual instrumentation system and some acquisition cards.

PREVIOUS KNOWLEDGE**Relationship to other subjects of the same degree**

There are no specified enrollment restrictions with other subjects of the curriculum.

Other requirements

It is highly desirable that students have knowledge of analysis and mathematical calculus, electrical network theory and analogue and digital components.

OUTCOMES

1402 - Degree in Telecommunications Electronic Engineering

- G3 - Acquisition of the knowledge of the basic and technological subjects that allows students to learn new methods and theories and endows them with the versatility to adapt to new situations.
- G4 - Ability to solve problems with initiative, decision-making and creativity, and to communicate and transmit knowledge, abilities and skills, understanding the ethical and professional responsibility of the activity of a telecommunications technical engineer.
- G5 - Knowledge to carry out measurements, calculations, assessments, evaluations, loss adjustments, studies, reports, task planning, and other analogous work in the specific field of telecommunications.
- G9 - Ability to work in a multidisciplinary environment and in a multilingual group and to communicate, in writing and orally, knowledge, procedures, results and ideas related to telecommunications and electronics.
- G6 - Ability in the handling of specifications, regulations and norms of compulsory compliance.
- TE3 - Ability to specify, implement, document and set-up electronics, instrumentation and control equipment and systems, considering both technical aspects and the relevant regulatory requirements.
- TE8 - Ability to specify and use electronic instrumentation and measurement systems.
- TE9 - Ability to analyze and solve the problems of interference and electromagnetic compatibility.

LEARNING OUTCOMES

- RA-1. Be able to perform basic electronic equipment measurements relating to the accuracy limitations of the measuring system (TE8).
- RA-2. Determine which is the contribution to the accuracy of the measuring system of the various stages that constitute the basis of their actual behavior (TE3).
- RA-4. Ability to apply the appropriate electronic conditioning for measuring certain variable by using a specific sensor (TE8).
- RA-5. Ability to develop and control electronic engineering systems oriented to test and measurement (TE8).
- RA-6. Be able to perform low-level measurements using specific electronic equipment (TE3).

DESCRIPTION OF CONTENTS

1. Signals acquisition and distribution systems.

Concepts. Components in a signal acquisition and distribution system (SAD). Integrated SAD. Topologies in SAS. Topologies in a SDS. Acquisition boards and signal distribution: hardware, software and applications. Sources of error and calibration in signal acquisition.

2. Voltage reference.

Voltage References: technical specifications, technologies, applications and current references.

3. Switches and Multiplexers.

Analog Switches: Technical Specifications, types and functions.

Analog multiplexers: Technical Specifications, static and dynamic errors, speed and multiplexing applications.

4. Sample and hold amplifiers.

Sample and hold amplifiers: Component parts and operation errors and dynamic and static applications.

5. Instrumentation systems.

Introduction: Objectives and topologies of an instrumentation systems. Device control through IEEE-488 bus. Device control through the USB bus. Acquisition and distribution of signals by the USB bus.

6. Electronic equipment: Meters for low level signals.

Measures low-level signals measurements. Electronic equipment for measuring low-level signals. Basic electronic circuits and dedicated equipments. Cases of application.

7. Laboratory sessions

LabVIEW: Introduction to graphical programming environment. System for data acquisition with USB communication: NI USB 6008 applied to the temperature monitoring and control of switches to obtain different functionalities of electronic circuits (alarm control, programmable gain amplifiers, low pass filters ...)

**WORKLOAD**

ACTIVITY	Hours	% To be attended
Theory classes	30,00	100
Laboratory practices	30,00	100
Development of group work	18,00	0
Preparation of evaluation activities	14,00	0
Preparing lectures	15,00	0
Preparation of practical classes and problem	43,00	0
TOTAL	150,00	

TEACHING METHODOLOGY

The development of the course is structured around four themes: the theory sessions, problems, tutorials, continuous evaluation tests and presentation of technical documentation practices. Group learning with the teacher

With respect to group learning with the teacher (sessions of theory and problems), use the lecture model (TE3, TE8, G3, G4, G5). At the exercise class, the teacher will explain a number of problems by which the student will learn to identify the essential elements to solve them. These sessions will also use the participatory approach in order to facilitate communication between students and student / teacher.

Tutorial time

The students have a schedule of tutorial time aimed to solving the problems, doubts, work orientation, etc.. The schedule of these tutorials will be indicated at the beginning of the academic year.

Laboratory sessions (TE3, TE8, G3, G4, G5, G9)

They will be organized around groups preferably formed by two people who should be planned for the design, assembly and different experimental works. At any time, if the teacher sees fit, the working group may be separated so that each member worked individually. Each practice combines experimental and theoretical activities, the estimated time for resolution is 3 hours.

The student may submit the resolution of a series of proposed tests. These are voluntary and must be resolved exclusively by the students without any help from the teacher. (TE3, TE8, G3, G4, G5, G9)

Teaching materials

The student will have in the virtual classroom over the academic year, the following documents:

Teaching Guide: provides sufficient data elements to determine what it is intended that the student learns, how it will do, under what conditions and how it will be evaluated.

Presentations from each of the course topics.

Problem of each lesson.

Continuous Tests (PECs) of each of the lessons.

The script of laboratory practices.

EVALUATION

In the first and second announcements the theory and laboratory work will be examined with a weight on the final grade of 60% and 40% respectively. For averaging the ratings of theory and laboratory must be separately equal or greater than 4.

Getting the theory mark

On **first announcement**, the theory mark will emerge as a result of:

1. (TE3, G3, G4, G5) A written exam consisting in four or five practical issues related to the course contents and with similar difficulty to the issues and problems done in class.
2. (TE3, G3, G4, G5, G9) As a formative assessment, the student will be able to deliver on the date specified by the teacher the continuous tests (CT) and unrecoverable. These tests must be submitted in PDF format only the teacher before the date indicated or deliver resolutions manuscript. The groups will be established at the begging of the course (first two weeks), afterwards changes are not allowed. If any member of the group is invited to leave it by the other members, this student will have to do all the tests by himself/herself In order to contribute for the final theory mark the average tests mark must be equal or greater than 4 and students present at least 50% of the PECS proposed. In this case, this average value will contribute to a 15% of the total theory score.
3. (TE3, G3, G4, G5, G9) Along the semester the students have to do 3 in-person test (PG) (30-60 minutes long) as part of the continuous assessment system. This test will be solved in working groups, at most 3 students. This test is unrecoverable. The groups will be established at the begging of the course (first two weeks), afterwards changes are not allowed. If any member of the group is invited to leave it by the other members, this student will have to do all the tests by himself/herself and its contribution to the final mark will be 15%.

Thus, the theory mark is obtained according to the following expression:

$$\begin{aligned} \text{if } CT_{\text{avg}} \geq 4 \text{ then Mark}_{\text{theory}} &= 0,7\text{Written Exam} + 0,15\text{PG} + 0,15CT_{\text{avg}} \\ \text{else } (CT_{\text{avg}} < 4) \text{ then Mark}_{\text{theory}} &= 0,7\text{Written Exam} + 0,15\text{PG} \end{aligned}$$

On **second announcement**, the theory mark will emerge as a result of:

$$\text{Mark}_{\text{theory}} = \text{Written Exam}$$

Getting the laboratory mark

Note: Depending on the characteristics of the practice it is required, prior to entry in the laboratory to do certain calculations and designs necessary for the realization of the experience. It will not be enter to the lab if they have not been previously.

Attendance at laboratory sessions is compulsory and in any case must meet the requirements specified in point 9 of article 6 of the evaluation and qualification regulations of the University of Valencia for degrees and master's degrees.

In **first announcement** the laboratory note will emerge from the following three evaluations:

The laboratory note emerge from the three following assessments:

1. (TE3, TE8, G3, G4, G5, G9) Score of the Experimental Practice (GPE), which scored 20% of the working laboratory. It assessed the skill demonstrated, interest in the assembly, the domain in the use of laboratory equipment and development of practice throughout the session. The score of the Experimental Practices will be delivered by groups of two.
2. (TE3, TE8, G3, G4, G5, G9) "S" is the mark assigned to the software demanded by the lecturer. The software developed can be evaluated **at any time during the semester, in the same session the lecturer asks for it**. The mark will be focused on work ability, organization, user friendly interface and design. The score of this part is 30%

3. (TE3, TE8, G3, G4, G5, G9) Note (E) obtained in the realization of a written examination to be held in the official announcement indicated in the official calendar of exams. This note will score 50% of the working laboratory.

Thus laboratory mark is obtained according to the following expression:

$$\text{Mark}_{\text{Lab}} = 0.2\text{GPE} + 0.3\text{S} + 0.5\text{E}$$

As long as each party is assigned a score greater than 4.

On **second announcement**, the laboratory mark will emerge as a result of:

- Submit the lab exercises and designs solved (GP). They will be the 40% of the working laboratory mark.
- The official laboratory announcement date the student will have 3 hours to perform the experimental setup and adjustment of a proposed circuit (ME). This part will be a 60% of the working laboratory.

Thus, the laboratory score will be obtained by:

$$\text{Mark}_{\text{Lab}} = 0.4\text{GP} + 0.6\text{ME}$$

The final mark of the subject, provided the theory and lab marks are equal or greater than 4, is obtained according to the following expression:

$$\text{Mark}_{\text{Subject}} = 0.6\text{Mark}_{\text{Theory}} + 0.4\text{Mark}_{\text{Lab}}$$

In any case, the evaluation system will be governed by what is established in the Evaluation and Qualification Regulations of the University of Valencia for degrees and masters that can be accessed from the web address:

(<https://webges.uv.es/uvTaeWeb/MuestraInformacionEdictoPublicoFrontAction.do?accion=inicio&idEdictoSeleccionado=5639>)

ADDENDUM COVID-19

This addendum will only be activated if the health situation requires so and with the prior agreement of the Governing Council

1. Contenidos

Se mantienen los contenidos inicialmente recogidos en la guía docente para las sesiones teóricas (Teoría y problemas).

En las sesiones de laboratorio se eliminan las actividades de las prácticas 3 y 4 relacionadas con el montaje de circuitos electrónicos que requieren necesariamente presencialidad.

2. Volumen de trabajo y planificación temporal de la docencia

Teoría: Al inicio de la docencia no presencial quedaban por impartir 14 horas de contenidos teóricos y resolución de problemas. Por lo que se impartirán 7 horas de teoría para dar cumplimiento de la reducción del 50 % por docencia no presencial. Las 7 horas de teoría reducidas se trasladan a tiempo de aprendizaje autónomo del estudiante con los materiales subidos al aula virtual (transparencias y clases grabadas en BBC).

Laboratorio: Al inicio de la docencia no presencial quedaban 18 horas por impartir, éstas se mantienen y se realizarán por videoconferencia.

Mantenimiento de la planificación temporal como docente

3. Metodología docente

Sustitución de la clase por la videoconferencia síncrona mediante “videoconferencia” accesible por el estudiante a través del aula virtual y ejecución de éstas por BBC el día y a la hora de la clase presencial.

Material utilizado en estas sesiones (transparencias y problemas resueltos) disponibles en el aula virtual. Mismos materiales previstos en la guía original para la docencia presencial.

Problemas propuestos para su entrega como evaluables disponibles en el aula virtual para su entrega mediante la opción de “Tarea” del aula virtual. La resolución de dudas se realizará por el sistema de tutorías establecido.

Sistema de tutorías: Se mantiene el programa de tutorías fijado al inicio del cuatrimestre, éstas se realizarán a través de BBC y a través del canal de la asignatura de Microsoft Teams.

4. Evaluación

1ª y 2ª Convocatoria (Teoría)

Mantenimiento de las notas resultantes de la evaluación continua obtenidas antes de la entrada en vigor del estado de alarma. El peso de las pruebas de evaluación continua se incrementa del 30 %, como figuraba en la guía docente inicial, al 40 % (20 % asociado a las PECs y 20 % asociado a las PGs).

Se mantienen las actividades evaluables de manera continua de la guía original.

Reducción del peso del examen final pasando del 70 % al 60 %.

Examen final: Se realizará un examen tipo test que constará de cuatro cuestiones. Se generarán diferentes exámenes, todos ellos con una dificultad similar. El desarrollo realizado por el estudiante para responder a cada cuestión (solución manuscrita original) deberá escanearse como máximo 10 minutos después de finalizar el examen. Tras la finalización del examen se dispondrá como máximo de 20 minutos para subir la solución manuscrita como tarea al aula virtual. En todas las hojas escaneadas debe figurar claramente el nombre y DNI del estudiante.

Si una persona no dispone de los medios para establecer esta conexión y acceder al aula virtual, deberá contactar con el profesorado por correo electrónico en el momento de publicación de este anexo a la guía docente.

Laboratorio

Se mantiene la evaluación propuesta en la guía docente original modificando el bloque E asociado a un examen presencial, distinguiendo entre evaluación continua y evaluación única. Evaluación continua: se sustituye el examen presencial por la entrega de dos actividades que no requieren presencialidad.

Evaluación única: se sustituye el examen presencial por la entrega de una actividad que no requiere presencialidad y se le comunicará al estudiante con una semana de antelación.

Se mantiene la exigencia de alcanzar un mínimo de 4 puntos en todas las partes indicadas en la guía docente inicial.

5. Bibliografía

Se sustituye la bibliografía recomendada por las clases de teoría grabadas con el BBC y disponibles en los enlaces web indicados en el Aula Virtual.
