

**COURSE DATA****Data Subject**

<b>Code</b>	34815
<b>Name</b>	High frequency circuits and subsystems
<b>Cycle</b>	Grade
<b>ECTS Credits</b>	6.0
<b>Academic year</b>	2018 - 2019

**Study (s)**

<b>Degree</b>	<b>Center</b>	<b>Acad. year</b>	<b>Period</b>
1402 - Degree in Telecommunications Electronic Engineering	School of Engineering	4	First term

**Subject-matter**

<b>Degree</b>	<b>Subject-matter</b>	<b>Character</b>
1402 - Degree in Telecommunications Electronic Engineering	16 - Electronics	Obligatory

**Coordination**

<b>Name</b>	<b>Department</b>
GONZALEZ MILLAN, VICENTE	242 - Electronic Engineering

**SUMMARY**

The subject of High Frequency Circuits and Subsystems is studied as the last part of the field of the Degree of Telecommunication Electronics Engineering. It provides the skills needed to understand the functioning of the main communication subsystems present in current equipment. It also introduces the circuits included within those subsystems without going into the details of the design procedure thereof.

The subsystems studied in the course are: RF signal amplifiers, RF oscillators and mixers, PLLs and synthesizers and modulators and demodulators. For each of them, their features and operating principles, important parameters and, where appropriate, examples of circuits are presented. In cases where the complexity of the system is not appropriate for the students, a “black box” model is presented.

## PREVIOUS KNOWLEDGE

### Relationship to other subjects of the same degree

There are no specified enrollment restrictions with other subjects of the curriculum.

### Other requirements

Knowledge of the fundamentals of communications and signal transmission in both guided and unguided media.

## OUTCOMES

### 1402 - Degree in Telecommunications Electronic Engineering

- G3 - Acquisition of the knowledge of the basic and technological subjects that allows students to learn new methods and theories and endows them with the versatility to adapt to new situations.
- G4 - Ability to solve problems with initiative, decision-making and creativity, and to communicate and transmit knowledge, abilities and skills, understanding the ethical and professional responsibility of the activity of a telecommunications technical engineer.
- G5 - Knowledge to carry out measurements, calculations, assessments, evaluations, loss adjustments, studies, reports, task planning, and other analogous work in the specific field of telecommunications.
- G9 - Ability to work in a multidisciplinary environment and in a multilingual group and to communicate, in writing and orally, knowledge, procedures, results and ideas related to telecommunications and electronics.
- G6 - Ability in the handling of specifications, regulations and norms of compulsory compliance.
- TE5 - Ability to design circuits for analog and digital electronics, analog-digital and digital-analog conversion, radio frequency, power and power conversion for telecommunications and computing applications.

## LEARNING OUTCOMES

After completing the course, the student should be able to:

LR1: Analyze in detail the behavior of an analog circuit (G3, G4, G5).

LR2: Know the different types of existing devices to address an analogical electronic design (G3, TE5).

LR3: Know how to choose the most appropriate type of circuit according to the needs of a design (G3, TE5).

LR4: Design an electronic system that meets a set of specifications (G5, G6, G9, TE5).

Skills to acquire:

S1: Recognize the building blocks of a communications system

S2: Recognize the integral blocks of an oscillator system and know how to calculate its phase noise.

S3: Recognize the integral blocks of an amplifier and know how to determine the influence on its behavior of the parameters that define them

S4: Know how to calculate the intermodulation products of a mixer.

S5: Know how to design blocks that make up a PLL and a frequency synthesizer.

S6: Know how to select the basic blocks of a transmitter or radiofrequency receiver system to meet specified specifications.

S7: Know how to calculate the global operating parameters of an RF receiver system and know how to obtain those parameters that are needed to meet specifications.

## DESCRIPTION OF CONTENTS

### 1. Introduction to radiofrequency systems

Carrier modulation

Block diagram of a radiofrequency system

Design parameters

Analogue and digital systems

### 2. Noise and distortion in RF

Distortion features

Linear distortion

Non-linear distortion

Non-linear distortion in modulated signals

Noise

### 3. RF Oscillators

Principles of oscillators

Main parameters

Phase noise. Leeson's model

Oscillators

Voltage controlled oscillators (VCO)

**4. Phase-Lock loops and frequency synthesis**

Introduction  
Study of an ideal PLL  
Specifications  
Effect of the filter  
Phase detectors  
Basic synthesizer  
Synthesizer configurations  
Phase noise in synthesizers  
Filtering the reference frequency

**5. Mixers**

Basic mixer  
Specifications of a mixer  
Devices used for mixers  
Mixer circuits.

**6. RF amplifiers**

Parameters of a RF amplifier  
Tuned amplifiers  
Multi-stage tuned amplifiers  
Wideband amplifiers  
Power amplifiers  
Non-linear amplifiers

**WORKLOAD**

ACTIVITY	Hours	% To be attended
Theory classes	30,00	100
Laboratory practices	20,00	100
Classroom practices	10,00	100
Study and independent work	24,00	0
Preparation of evaluation activities	32,00	0
Preparing lectures	12,00	0
Preparation of practical classes and problem	22,00	0
<b>TOTAL</b>	<b>150,00</b>	

## TEACHING METHODOLOGY

The methodology is divided into three types of activities. In all cases, the students will have access to teaching materials in advance related to the contents of the course through Virtual Classroom (e-learning platform of the University of Valencia), to facilitate the preparation of classes.

- **Theory classes.** The lectures will develop the issues by providing a global and inclusive vision, analyzing in detail the key and more complex issues. To encourage student participation, lectures will alternate with examples whose resolution will be made jointly by the teacher and students. The teacher can also evaluate the student's prior preparation through issues at the beginning of it (G3, G5, TE5).
- **Classes of problems.** In the practical classes will be held discussion sessions and resolution of the most significant problems in each section of the course. Sets of problems will be proposed to be developed in groups, and later exposed by the students (G4, TE5).
- **Laboratory classes.** In each laboratory class will be assessed both prior preparation of the practice to be performed by verifying the design and simulation of circuits, as the final results (G6, G9, TE5).

## EVALUATION

The evaluation of the course will take place in two ways: first, continuous assessment of student work, both at the classroom and at the laboratory, and, second, by the score on a final exam.

### FIRST CALL FOR EXAMINATION

Theory and problems (70% of grade). (G3, G4, TE5).

The continuous evaluation of the theory and problems (SCORE<sub>CONT</sub>), with 60% of the grade corresponding to the scores obtained at one or several of the following items with the weights assigned by the teacher:

- Tests performed at the end of each item or group of items
- Delivery of exercises performed individually or in groups
- Assignments about issues dealing with the subject proposed by the teacher

The remaining 40% will come from the final exam (SCORE<sub>EX</sub>) of the subject. A minimum score of 4/10 will be needed to pass the subject.

Laboratory ( $SCORE_{LAB}$ , 30% of grade). Recoverable activity. (G5, G6, G9, TE5).

The evaluation of the laboratory shall be by compulsory attendance control all practices and the delivery of a report / questionnaire practice by groups or individually. For reasons of force majeure, duly justified, a maximum of 20% of the sessions may be discontinued. In order to pass the subject the qualification obtained in this part must be equal to or higher than 4.

## SECOND CALL FOR EXAMINATION

Theory and problems (70% of grade). (G3, G4, TE5).

The evaluation of the theory and problems of the subject shall be by an examination ( $SCORE_{EX}$ ) of the contents of the subject and those of all the continuous assessment activities carried out during the course. In order to pass the subject the qualification obtained in the examination must be equal to or higher than 4.

Laboratory ( $SCORE_{LAB}$ , 30% of grade). G5, G6, G9, TE5).

The evaluation of the laboratory in second call shall be by an examination ( $SCORE_{LAB}$ ) of the contents of the subject carried out at the lab. In order to pass the subject the qualification obtained in the examination must be equal to or higher than 4.

## FINAL SCORE

### First Call

If  $SCORE_{LAB} \geq 4$ ,

Si  $SCORE_{EX} < 4$ ,  $SCORE_{FINAL} = SCORE_{EX}$

Si  $SCORE_{EX} \geq 4$ ,

$SCORE_{FINAL} = 0.3 * SCORE_{LAB} + 0.7 * (0.6 * SCORE_{CONT} + 0.4 * SCORE_{EX})$

If  $SCORE_{LAB} < 4$ ,

$SCORE_{FINAL} = SCORE_{LAB}$

### Second call

If  $SCORE_{LAB} \geq 4$ ,

Si  $\text{SCORE}_{\text{EX}} < 4$ ,  $\text{SCORE}_{\text{FINAL}} = \text{SCORE}_{\text{EX}}$

Si  $\text{SCORE}_{\text{EX}} \geq 4$ ,

$\text{SCORE}_{\text{FINAL}} = 0.3 * \text{SCORE}_{\text{LAB}} + 0.7 * \text{SCORE}_{\text{EX}}$

If  $\text{SCORE}_{\text{LAB}} < 4$ ,

$\text{SCORE}_{\text{FINAL}} = \text{SCORE}_{\text{LAB}}$

In any case, the evaluation system will be governed by what is established in the “Reglament d’Avaluació i Qualificació de la Universitat de València per a Graus i Màsters (<https://webges.uv.es/uvTaeWeb/MuestraInformacionEdictoPublicoFrontAction.do?accion=inicio&idEdictoSeleccionado=5639>)”.
