SUMMARY

Supplementary pension systems is a course of 4.5 ECTS credits linked to the subject of the same name and included in Human Resources Management itinerary on the Degree of ADE.

It is taught in the first semester of the fourth year of the Degree of ADE . They are going to work the following aspects: Analysis of the basic systems of financing the benefits; Analysis of the Plans and Pension Funds; analysis of collective life insurance, Social Security Business Plans and Mutual Provident Societies. Not need any specific knowledge of other subjects.

PREVIOUS KNOWLEDGE

Relationship to other subjects of the same degree

There are no specified enrollment restrictions with other subjects of the curriculum.

Other requirements

No specific prior knowledge of other subjects of the Degree by the student are required.
It is advised having passed the subject FINANCIAL MATHEMATICS.

OUTCOMES

1313 - Degree in Business Management and Administration

- Demonstrate capacity for analysis and synthesis.
- Show commitment to ethics and social responsibility.
- Know complementary social welfare systems and be able to assess the effects of their implementation on the organisation.

LEARNING OUTCOMES

- 1) Know the system of the three pillars on which Social Security is based.
- 2) Understand the importance of the concept of deferred wages as a way to make a proper retirement planning.
- 3) Ability to select the instruments of corporate social security appropriate to the situation of the company and its workers.

DESCRIPTION OF CONTENTS

1. SUBJECT 1. BASIC NOTIONS

2. SUBJECT 2. PENSION PLANS AND FUNDS

3. SUBJECT 3. OTHER INSTRUMENTS OF SOCIAL WELFARE

**4. SUBJECT 4. DESIGN OF A PRIVATE PENSION PLAN****WORKLOAD**

ACTIVITY	Hours	% To be attended
Theory classes	30,00	100
Classroom practices	15,00	100
Development of group work	10,00	0
Development of individual work	7,50	0
Study and independent work	10,00	0
Readings supplementary material	10,00	0
Preparation of evaluation activities	10,00	0
Preparing lectures	10,00	0
Preparation of practical classes and problem	10,00	0
TOTAL	112,50	

TEACHING METHODOLOGY

The development of the course is structured in a theory session per week (lecture) in two hours and a practice session of one hour.

Practical classes will consist in solving exercises, study of real case studies, class presentations and discussions of readings. The need for the development of theoretical and practical material available to find students in the Virtual Classroom (aulavirtual.uv.es) in advance. It is reminded that attendance is compulsory in all classroom activities of this subject.

The methodology to teach the subject in both theoretical and practical classes, is pointing to the ability to combine individual work with the teamwork. More specifically, the methodology used can be described as follows:

For the lectures students must prepare in advance the basic reading material that forms the basis for the theoretical explanation, and the main doubts in making such reading material. The teacher during class combine their explanations with the active participation of students (approach can answer questions that the teacher and / or peers, resolution of short questions raised by the teacher and group discussion of the issues that have attracted the most interest). The objective is that students develop both their capacity to autonomous work (work prior to class) and their ability to work together, argue and defend Ideas (discussion groups) and oral and written communication (raising doubts on the subject in writing and solving public issues that have been raised in class).

The practical classes, meanwhile, will be made by combining two different strategies. The first will consist of the resolution of a number of theoretical issues and problems-type by the teacher, through which students learn to identify the essential elements of posing and solving problems for each theme. In the second, students must solve issues and problems similar to the above, occasionally in class and as homework usually nature. These unresolved issues can be collected by the teacher and will proceed to

their analysis and correction on the board.

Alongside this, work may be made based on group discussion of texts given by Professor previous form as well as the resolution of more complex exercises that will later be presented in class. The groups created for both types of tasks will be different, in order to facilitate interaction with classmates. Both these tasks as delivering group exercise individually indicated above, will form the basis of continuous assessment of the student.

An important element of learning is personalized tutorials. They may be settled individually any doubts, and questions may arise during the teaching-learning process, so that students are encouraged to use them regularly.

EVALUATION

The course will be assessed from the consideration of the following aspects:

- 1) Written exam at the end of the semester. This examination, which will run from item 1 to item 4, will consist of theoretical and practical questions and let you get up to 60% of the final grade (6 out of 10).
 - 2) The remaining 40% will be achieved from the practical activities developed by the student during the semester, taking into account the continuous assessment as a result of delivery problems solved, follow-up testing and development work. **Individual activities** not delivered, or those that have obtained a suspense note, will be considered **recoverable on second call**. Activities carried out in groups or with the intervention of more than one person, such as class presentations or debates, are not recoverable.
- The sum of the two, properly weighted above components provide the final mark achieved by the student. In this regard, the subject will be considered approved if the student gets 5 points out of 10, as the sum of all previous concepts. However, it is considered an essential requirement to pass the examination of final exam synthesis, which is binding. Failure to pass the exam synthesis, the highest rating that the student can obtain as a sum of all the components will be 4.5 points.

NOTE: The use of illegal or fraudulent methods (copying, plagiarism, impersonation, etc.) to obtain undeserved results in the evaluable tests will be penalized with a zero in the test grade for those involved, subject to other penalties that may arise from the academic authorities. (see REGLAMENT D'AVALUACIÓ I QUALIFICACIÓ DE LA UNIVERSITAT DE VALÈNCIA PER A TÍTOLS DE GRAU I MÀSTER. Approved by the Governing Council of May 30, 2017. ACGUV 108/2017).

ADDENDUM COVID-19

This addendum will only be activated if the health situation requires so and with the prior agreement of the Governing Council

If the situation generated by COVID-19 worsens, and the health and academic authorities agree to evolve to hybrid teaching or non-classroom teaching scenarios, the following adaptations of the Teaching Guide are proposed.

1. Contents.

The contents initially collected in the teaching guide remain the same.

2. Workload.

The workload of the different activities remains the same in the ECTS credits marked in the initial teaching guide.

3. Teaching methodology.

The activities planning will be provided in the virtual classroom, with classes in real time, tasks to be performed and scheduled deliveries. To teach classes in real time: BBC video conference. Tutorials: by email, by the virtual classroom, or by videoconference by appointment.

4. Evaluation.

a) **Continuous evaluation:** not change.

b) **Final evaluation test, if it cannot be in person:** based on:

- A test with theoretical and practical questions, a summary of those carried out during the course, with limited time, which will initially take place in a videoconference connection.

- A written exam with practical exercises and theoretical questions. The test will be loaded in the virtual classroom at the scheduled time for the start of the exam. The duration of the exam is limited and students must upload a file or files with the exercises and the answers made in handwritten form, scanning or photographing with good resolution, so that it is readable; and a file with the answer to the software's question. As soon as the final exam finish, in addition to the submitted answer files, each student must deliver an audio file with the reasoning and explanation of the answer given to the practical

exercises answered, through a task enabled for this. All the course material will be available, both in the test part and in the written part. The audio file can be recorded with mobile devices as an audio message, for example. Each student will have up to 30 minutes to record these explanations and deliver the audio file in a virtual classroom. If the audio file is not delivered within the established period, the answers to practical problems will not be corrected. These explanations will contribute to evaluate this part.

5. References.

Not change.
