## SUMMARY

Statistics I is a basic training subject assigned to the area of Quantitative Methods for Economics and Business that is lectured in the second term of the first year of the Finance and Accounting Degree.

The formative importance of the subject can be established in a double aspect:

a) On the one hand, the basic training to get the capacitiy of description, analysis, understanding and synthesis for the prediction that is carried out with accesible information (usually numerical) taken as true.

b) On the other hand, basic training under uncertity conditions. Knowledge of statistical language and mathematical theories and models in the probabilistic framework.

The training referred to in section a) is also basic for the development of other subjects of the degree.

In the professional development of the graduates in the Degree of Finance and Accounting, critical reading and the adequate creation of reports and statistical analysis both descriptive and predictive seem fundamental.

Briefly, the contents developed in this subject are the following:

Descriptive analysis of variables and statistical data. Inequality measures and economic indicators. Linear regression. Introduction to probability. Random variables and probability distributions. Specific models of probability.

## PREVIOUS KNOWLEDGE

#### Relationship to other subjects of the same degree

There are no specified enrollment restrictions with other subjects of the curriculum.

#### **Other requirements**

It is recommended that in order to take this course successfully, the student must have a level of mathematics basic (the knowledge that corresponds to first and second of baccalaureate in the branch of and social sciences).

## OUTCOMES

#### 1315 - Degree in Finance and Accounting

 Conocer y comprender las herramientas estadísticas básicas para la presentación y descripción de resultados financieros y empresariales.

## LEARNING OUTCOMES

The fundamental learning outcomes expected in this subject are:

- Ability to develop and defend an economic report.
- Ability to recognise an economic problem based on the observation of the economic reality.
- Management of basic quantitative tools and their application to the economic environment.
- Ability to select a theoretical framework of reference for analysis.

- Knowledge and understanding of the basic tools of quantitative nature for analysis, diagnostic and prospection.

### Vniver§itat \vec{p} d València

- Ability to identify the econometrics problems raised in the model and to apply the theorretical knowledge for its correct treatment.

- Ability to search, select and assess the appropiate information for the analysis.
- Abilitiy to apply different methods and analysis tecniques under uncertainty.

# **DESCRIPTION OF CONTENTS**

#### 1. Univariate data analysis

- 1.Introduction
- 2. Univariate data: measures of central position, dispersion and shape
- 3.Measures of concentration

#### 2. Multivariate data analysis

- 1. Multivariate data: joint and marginal frequency distributions
- 2.Mean vector and variance-covariance matrix
- 3.Relationship between variables

### 3. Regression

Introduction
 Least squares regression
 Goodness of fit

#### 4. Time series models

- 1.Introduction
- 2. Economic indices
- 3.Time series

#### 5. Univariate Probability Models

- 1.Introduction to probability theory
- 2.Random variable and probability distribution
- 3. Discrete and continuous random variables
- 4. Expected value and variance. Properties.

### Vniver§itatÿdValència

### 6. Specific Univariate Probability Models

- 1.Discrete models
- 2.Continuous models

#### 7. Multivariate Probability Models

1.Introducción

- 2. Joint probability distributions, marginal probability distributions and conditional probability distributions
- 3.Mean vector and variance-covariance matrix
- 4.Independence. Correlation coefficient
- 5. Specific multivariate probability models

# WORKLOAD

ACTIVITY	Hours	% To be attended
Theory classes	30,00	100
Computer classroom practice	15,00	100
Classroom practices	15,00	100
Development of group work	15,00	0
Development of individual work	6,00	0
Study and independent work	14,00	0
Readings supplementary material	10,00	0
Preparation of evaluation activities	10,00	0
Preparing lectures	10,00	0
Preparation of practical classes and problem	10,00	0
Resolution of case studies	15,00	0
ΤΟΤΑ	L 150,00	

## **TEACHING METHODOLOGY**

The development of the subject is structured around theory sessions, practical sessions and laboratory sessions. In the theory classes, concepts are introduced and contextualised in the different fields of application of the economic and financial framework. The student is motivated and indicated the most appropriate resources to study the subject in depth.

For laboratory classes it will be necessary to use the computer. In these classes the teacher will be able to propose data files that students will analyse and apply under the teacher supervision, the concepts learned in the theory and practice classes.

# **EVALUATION**

The students learning shall be evaluated through a continous assessment process plus a written synthesis test at the end of the term.

The aim of the continuous assessment process is to develop the students skills and enhance the daily work. This part of the evaluation process is backed on class atendance, participation and evaluable wrok. It represents 30% of the final grade.

The systhesis test wil consist of a written test to assess whether the student has assimilated the key concepts of the program. This test represents 70% of the final grade.

The final grade is the weighted sum of the synthesis test plus the continous assessment process. In the case the final test is not passed, the final grade cannot exceed a maximum of 4.5.

The student who does not participate in the continous assessment process, could be evaluated in the synthesis test over a maximum of 7. In order to pass the subject, the student might have obtained a minimum of 5 out of 7 in the final test. Due the nature of the continous assessment proves, these are non-recoverable.

## ADDENDUM COVID-19

This addendum will only be activated if the health situation requires so and with the prior agreement of the Governing Council

### **1. CONTENTS**

All the contents referred to in the program are maintained.

#### 2. WORKLOAD AND TIME PLANNING OF TEACHING.

The workload of the activities that add up to the hours of dedication in ECTS credits marked in the teaching guide is maintained: 30 hours of theoretical classes and 30 hours of practical classes.

In case of blended learning, the calendar of weeks can be consulted here: https://ir.uv.es/estudia/horarios2sem.

### **3. TEACHING METHODOLOGY**

The modality of the classes for the students will depend on the social and health conditions and the restrictions established by the competent authorities.

In case of **online teaching**, classes will be given by videoconference, preferably synchronous, using Blackboard Collaborate, Teams, Skype or the tool that the lecturer considers appropriate to optimize the student's teaching-learning process during the schedule program sessions, **which remain the same days and times**.

In the case of **blended teaching**, the students will have to access the classroom in alternate weeks according to the initial of their last name (A-M or L-Z). The classes will be broadcast so that the students will have face-to-face teaching one week, and the next week they will follow the classes in streaming.

The contact with the students will be reinforced through the forum in the Virtual Classroom and/or e-mail and/or videotutorials for topics that are considered of interest, and materials will be additionally incorporated in the Virtual Classroom for the adequate follow-up of the course.

### **4. EVALUATION**

A face-to-face exam is planned, maintaining the criteria set out in the teaching guide and the weightings of the continuous assessment (30%) and the final face-to-face exam (70%).

### **5. BIBLIOGRAPHY**

The current bibliography of the guide is complemented with the material deposited in the Virtual Classroom.
