SUMMARY

Statistics II is a 6 credit course lectured in the 2nd semester of the 1st course of the degree of Psychology. The overall aim of the course is to provide procedures to respond to issues of interest to psychologists using inferential statistical analysis of data, so the course is theoretical and practical. The inferential data analysis techniques are prerequisite to other obligatory subjects of the curriculum, such as Psychometrics and Research Design, and other optional subjects. The statistical concepts are also required to carry out technical reports and empirical research in different subjects and areas of expertise as well as theoretical understanding of the foundations of empirical knowledge of the behavior.

PREVIOUS KNOWLEDGE

Relationship to other subjects of the same degree

There are no specified enrollment restrictions with other subjects of the curriculum.

Other requirements

RECOMMENDATIONS

This subject rests on the concepts and procedures previously introduced in the Statistics I subject. Having passed the Statistics, I and II subjects is a requirement for enrollment in Psychometrics, a second-year subject.

COMPETENCES (RD 1393/2007) // LEARNING OUTCOMES (RD 822/2021)

1319 - Degree in Psychology

- Students must have acquired knowledge and understanding in a specific field of study, on the basis of general secondary education and at a level that includes mainly knowledge drawn from advanced textbooks, but also some cutting-edge knowledge in their field of study.
- Students must have the ability to gather and interpret relevant data (usually in their field of study) to make judgements that take relevant social, scientific or ethical issues into consideration.
- Students must be able to communicate information, ideas, problems and solutions to both expert and lay audiences.
- Be able to describe and measure variables (personality, intelligence, attitudes, aptitudes, etc.) and cognitive, emotional, psychobiological and behavioural processes.
- Be able to measure and obtain relevant data for the assessment of interventions.
- Know how to analyse and interpret the results of assessment.
- Be able to prepare oral and written reports.
- Know and comply with professional ethics of Psychology.
- Be able to apply methodological knowledge to solve the problems arising in professional practice.
- Know the fundamentals of inferential statistics, as well as their conditions of use and application to psychology.
- Be able to apply inferential techniques to analyse psychological data through statistical software and other information technologies.

LEARNING OUTCOMES (RD 1393/2007) // NO CONTENT (RD 822/2021)

Student must:

- a) Know and apply correctly inferential- statistical procedures of data analysis that are most commonly used in the process of obtaining scientific information in the field of psychology.
- b) Identify and formulate the research question in terms of statistical hypothesis.
- c) Select the most appropriate techniques to contrast the hypotheses, considering the characteristics of the data being operated.
- d) Perform calculations using computer and other additional methods introduced in the classroom.
- e) Interpret results and draw conclusions.

Express the results and conclusions in technical language understandable to nonprofessionals.

DESCRIPTION OF CONTENTS

1. Basic concepts of statistical inference

1. Introduction.
2. Sampling. Introduction and main types of sampling.
3. Sampling distribution of the mean, variance and proportion.

2. Parameter estimation

1. Point estimation: Characteristics and bias of the estimators.
2. Interval estimation.

3. Hypothesis testing

1. Definition and basic concepts.
2. Application of hypothesis testing to the case of the mean and proportion.
3. Factors affecting the rejection of the null hypothesis.
4. Statistical significance and practical relevance. Effect size.
5. Errors associated with hypothesis testing.

4. Parametric hypothesis testing

1. Introduction.
2. Contrast of two means (independent and dependent groups).
3. Contrast of two independent variances (ratio of variances).
4. Between and within subjects univariate ANOVAs. Squared means. F test. Post-hoc tests.

5. Nonparametric Hypothesis testing

1. Checking assumptions.
2. Contrasts for a group.
3. Contrast of two or more dependent and independent groups: Mann-Whitney, Kruskal-Wallis, Wilcoxon and Friedman tests.

6. Association contrasts and prediction.

1. Inference on correlation and regression analysis: hypothesis tests of the coefficients.
2. Inference on the association between categorical data: square chi tests of independence and adjustment. Proportions.

7. Introducing Multivariate Statistics techniques

1. Introduction.
2. Classifications and uses.

WORKLOAD

ACTIVITY	Hours	% To be attended
Theoretical and practical classes	60,00	100
Development of group work	12,50	0
Development of individual work	12,50	0
Study and independent work	50,00	0
Preparation of evaluation activities	15,00	0
TOTAL	150,00	

TEACHING METHODOLOGY

The teaching of the course combine the following strategies:

- (1) Exhibitions and presentations (lectures) of the contents of the subject.
- (2) Practical classes based on exercises, such as data introduction and processing, or case studies.
- (3) Scheduled group tutoring if necessary.

Preparation of the required work independently.

EVALUATION

EVALUATION: Statistics I, II, Designs and Research in Logopedia.

The result of the student evaluation is a qualification that will oscillate between 0 and 10 points. This qualification depends of the following parts:

System of Evaluation 1 (ES1): ESTIMATION OF THEORETICAL AND PRACTICAL CONTENTS BY MEANS OF ORAL OR WRITTEN TESTS, AND SKILL PERFORMANCE. It will represent 85% of the final qualification. It will consist of two sections: A) continuous evaluation during the scheduled period of classes, with a maximum of 15% and, B) final evaluation, with a maximum qualification of 70%, in which it will be necessary to achieve a minimum of 50% to pass the course. Section B is recoverable in second call.

System of Evaluation 2 (ES2): ORAL OR WRITTEN PRESENTATION OF REPORTS ABOUT INDIVIDUAL OR GROUP WORKS, CLINICAL CASES, RESOLUTION OF PROBLEMS OR MANAGEMENT OF DIAGNOSTIC TESTS. It will add a maximum of 15% of the final qualification. It is necessary to achieve a minimum of 50% in this section to pass the course. This section is recoverable in second call.

Additional considerations:

1. The described sections will be summed only when a student reach the minimum required conditions.
2. If a student do not pass some of the compulsory sections in the first call, the points of the other sections will be save for the second call.
3. Dates of realisation of the tests of the Section A of the ES1 will be established by the teacher along the course. They can be individual or groupal evaluations about the topics listed in the Course Guide.
4. The qualification of the course follow the Normative of Qualifications of the University of Valencia (ACGUV 108/2017). In accordance with it, the following scale of qualification will be used:
 -
 - Of 0 to 4.9: fail
 - Of 5 to 6.9: pass
 - Of 7 to 8.9: remarkable

- Of 9 to 10: excellent or excellent with honors

As stated in the normative about the assignment of "Excellent with honors" qualification, it will be for strict order of numerical mark. In case of tie, the qualification will be assigned to the student with higher numerical mark in the Section B of the ES1. If it follows the tie, the higher of the ES2 and, finally the higher of the Section A of the ES1. If all of them are equal, teacher can add an additional exam.

5. The copy or plagiarism of any task of the evaluation will suppose the impossibility to pass the course. The relevant disciplinary measures may be applied.

6. Take into account that, in accordance with the article 13.d) of the Statute of the University Student (RD 1791/2010, of 30 of December), a student is to owe abstain in the utilisation or cooperation in fraudulent procedures in the tests of evaluation and works that he realise, or in official documents of the university.

7. In the individual or colective tutorials, the professor can to ask a student for questions in order to verify the degree of participation and acompliance of the objectives of a task of the course. If not accepting this verification, the student will not pass the task or activity in question .

8. The marks obtained in the first call will be incorporated in the minutes of the subject according to the following rules:

- If there is no qualification evaluation section with greater weight, the rating will not be presented, regardless of the rest.
- If there's rating in the evaluation section with greater weight and does not reach the minimum requirements shall be entered SUSPENSE and base 10 numerical grade qualification of this section.
- If there's rating in the evaluation section with greater weight, and this exceeds the minimum requirements, but those requirements are met in any of the remaining sections consist SUSPENSE and numerical note will be based 10 qualifying paragraph by which does not exceed the subject.

9. SECOND CALL, proceed according to the following rules:

- Only fit the PRESENTED NO option when has not been presented to more than one of the sections of assessment, including among these the highest weighting.
- If scores in all sections of assessment and no minimum requirements are met in any of them, and the note will consist SUSPENSE base 10 corresponding to the section that has not been surpassed. If more than one section, the unsurpassed, consist the maximum score within the suspense in base 10.
- If you do not exceed one or more of the minimum requirements and lack a section evaluation shall be recorded and numerical note SUSPENSE base 10 of qualification paragraph not exceeded.
- If two evaluation points are exceeded and there is a third party that has not presented evidence evaluation shall be recorded SUSPENSE and as rating, the average score being 0.0 part not presented (maximum possible 4.9).
- If the test higher weight is exceeded, but evidence is lacking in one or more of the other sections, consist SUSPENSE. Parts are added together and: a) if the sum is less than 5, it will be recorded as

a result; b) if the sum is greater than 5, shall be recorded 4.9.

10. If the subject is passed in first call, the student will not be able to examine in second call with the purpose to improve his note.

11. The consultation and appeal of the qualification obtained shall be subject to the provisions of "Reglament d'avaluació i qualificació de la Universitat de València per a títols de grau i màster (ACGUV de 30 de maig de 2017)".

ADDENDUM COVID-19

This addendum will only be activated if the health situation requires so and with the prior agreement of the Governing Council

1. Contents

The contents in the teaching guide are maintained.

2. Volume of work and temporary planning of teaching. The volume of work is affected in face-to-face hours (in a strict, physical, face-to-face interpretation, since online classes continue to be taught). From 100% of face-to-face hours of theoretical-practical teaching, 25% of classes are physically taught in the classroom for each student. The classes will be adapted to the online format and will be extended for the time determined by the Academic Committee of the Degree, in accordance with the guidelines received from the Rectorate. The volume of work will be always adapted to the current model, being online, hybrid or face-to-face.

3. Teaching methodology

In addition to the methodology used in the classes taught physically in the classroom, the tools in use with greater or less intensity for communication, teaching and tutoring in on line and the hybrid or semi-face-to-face context are the following:

1. Uploading materials to the Virtual Classroom or to the UV teacher's website
2. Proposal of activities by Virtual Classroom or on the UV teacher's website
3. Blackboard Communicate Synchronous Video Conference
4. Blackboard Communicate Asynchronous Video Conferencing
5. Slides with audio
6. Discussions in the forum
7. Solved problems / exercises (practical classes / laboratories)
8. Videos recorded in the laboratory (practical classes / laboratories)
9. Work with simulators or calculation / statistics packages (practical classes / laboratories)
10. Project development
11. Presentation of projects
12. Tutorials by videoconference
13. Forum or chat in Virtual Classroom
14. Others (activation of social networks, student representatives dynamize Virtual Classroom messages by WhatsApp and alert students with connection problems or similar situations).

In the non-face-to-face classes, which will take place at the time established by the Faculty of Psychology and Speech Therapy, synchronous methodologies will be prioritized (e.g., via videoconferences or chats)

that encourage interaction. Depending on the characteristics of the topic, one or other tools will be implemented, including from materials with explanations and image captures, to demonstrations, recordings and / or PowerPoint speech.

The most used for tutorials are synchronous communication or videoconferencing tools. Both these and the other methodologies included in the list are used with sufficient flexibility to respond to the different situations in which the students could be and the means available to the students. The students can alert of a problematic situation through e-mail, even from their mobile phones, to establish alternative communication channels and deadlines.

For the autonomous work of the students, these and other methodologies will be used, such as the development of projects or participation in the forum.

4. Assessment

The final exams will be held in accordance with the regime determined by the agreements of the Governing Council of the University of Valencia at that time. This will lead to two scenarios:

1. NORMAL SCENARIO (FACE TO FACE FINAL TEST)

The teaching guide contemplates the evaluation based on:

Assessment System 1 (SE1): ASSESSMENT OF THEORETICAL AND PRACTICAL CONTENTS THROUGH ORAL, WRITTEN OR SKILLS PERFORMANCE TESTS. It will account for 85% of the final grade. It will consist of two sections: A) continuous evaluation

during the teaching period of the subject, with an assessment of 15% and, B) final evaluation, with a rating of 70%, in which it will be necessary to achieve a minimum mastery of 50% to pass the subject. This section B is recoverable on second call.

Assessment System 2 (SE2): ORAL OR WRITTEN PRESENTATION OF REPORTS, INDIVIDUAL OR GROUP WORKS, CLINICAL CASES, PROBLEM RESOLUTION or HANDLING OF DIAGNOSTIC TESTS. It will represent 15% of the final grade. It is necessary to achieve a minimum mastery of 50% in this section to pass the subject. This section is recoverable on second call.

Therefore, in this scenario, the final evaluation (section B of the Evaluation System 1 [SE1]) is a PRESENTIAL test.

2. SCENARIO THAT MAKES IMPOSSIBLE THE FINAL TEST IN A PRESENTIAL WAY DUE TO COVID-19

In the scenario in which the final test could not be carried out in person as a result of COVID-19, the

percentages related to the evaluation sections would be modified:

Non-face-to-face exam scenario

Assessment System 1 (SE1): ASSESSMENT OF THEORETICAL AND PRACTICAL CONTENTS THROUGH ORAL, WRITTEN OR SKILLS PERFORMANCE TESTS. It will account for 75% of the final grade. It will consist of two sections: A) continuous assessment during the teaching period of the subject, with a 25% assessment and, B) final assessment, with a 50% assessment, in which it will be necessary to achieve a minimum mastery of 50% to pass the subject. This section B is recoverable on second call.

Assessment System 2 (SE2): ORAL OR WRITTEN PRESENTATION OF REPORTS, INDIVIDUAL OR GROUP WORKS, CLINICAL CASES, PROBLEM RESOLUTION or HANDLING OF DIAGNOSTIC TESTS. It will be 25% of the final grade. It is necessary to achieve a minimum mastery of 50% in this section to pass the subject. This section is recoverable on second call.

NON-PRESENTIAL EXAM FORMAT. The final test (SE1; section B) will continue to be made up of an exam (that is, a test with multiple choice and / or development questions), except that it will be non-face-to-face, with the Virtual Classroom being the most appropriate tool for this scenario. Additionally, for the presentation of REPORTS (Assessment System 2; SE2), the written report will be sent no later than the day of the exam, following the instructions for each group (by email from account @alumni.uv.es, as Classroom task Virtual or as indicated in each group).

METHODOLOGY IN NON-PRESENTIAL EXAM SCENARIO. For the final test, the UV Virtual Classroom will be used as a medium. It will take place on the day and time officially indicated by the Faculty of Psychology and Speech Therapy. The professor will request the identification of the student in order to verify their identity at the beginning of the test. The student may, as in face-to-face exams, make use of tables and calculators.

CONTINGENCIES FOR THE CASE OF NON-PRESENTIAL EXAMINATION. If a student does not have the necessary equipment to develop an evaluation test according to the proposed means and has previously communicated it to the teachers at least two weeks before the exam, or there are difficulties that have occurred at the time of the test that have been documented (screenshot, photo ...), the possibility of scheduling the completion of the final test in person or orally if the guidelines of the health authorities and the consequent contingency plans of the UV allow it, could be considered.

FINAL CONSIDERATIONS

In either of the two scenarios, the percentages relating to the evaluation sections of the second call would be the same as in the first call.

The teaching staff will use the plagiarism detection systems contracted by the UV in the evaluation evidence. The manifest "copy" of any test, task, activity, or report, whether individual or group, that

serves for evaluation purposes in the subject, will make it impossible to pass the subject.

The teaching staff may request individual or small group interviews by videoconference to verify the degree of participation and the achievement of the objectives pursued in any task carried out. Declining this verification by the student will mean not passing the task / activity in question.

5. Bibliography

The existing bibliography is maintained; the library VPN resources allow access to the information necessary for aspects of the guide such as the preparation of the report. As an alternative to manuals not available online and as a teaching aid, various updates can be included with adaptations and materials prepared by the teaching staff of the subject. All with the premises that its dissemination implies as property of the University of Valencia and shared under a Creative Commons license for use mentioning authorship and without commercial purpose — this includes from explanatory texts to recordings with demonstrations and execution of procedures to which the student accesses through the Virtual Classroom.
