SUMMARY

This subject falls within the 5th year programme of the Degree in Dentistry.

Students put into practise the knowledge acquired throughout this degree in an integrated, sequential and ordered way, in order to establish a diagnose and create a treatment plan for adult patients, under professor's supervision.

It does not include theoretical content, as this one is taught through the 4 previous years of the degree.

PREVIOUS KNOWLEDGE**Relationship to other subjects of the same degree****1206 - Degree in Dentistry :**

R4-OBLIGATION TO HAVE SUCCESSFULLY COMPLETED THE COURSE

34714 - Oral medicine

34715 - Oral surgery

34717 - Dental prosthesis II

34719 - Dental pathology, conservative dentistry and endodocny II

34723 - Periodontics

1210 - Grado de Odontología 2012 :

- 34714 - Oral medicine
- 34715 - Oral surgery
- 34717 - Dental prosthesis II
- 34719 - Dental pathology, conservative dentistry and endodontology II
- 34723 - Periodontics

Other requirements

OUTCOMES

1206 - Grado de Odontología

-
-
-
- Conocer y aplicar el tratamiento básico de la patología bucodentaria más habitual en pacientes de todas las edades. Los procedimientos terapéuticos deberán basarse en el concepto de invasión mínima y en un enfoque global e integrado del tratamiento bucodental.
-
- Plan and propose appropriate preventive measures for each clinical situation.
-
-

LEARNING OUTCOMES

Students will be able to make a diagnosis according to the oral pathology that an adult suffers from. In order to do that, they have to know the basic sequence of an oral examination, compile a detailed clinical history and correctly interpret radiological and analytical tests, and the analysis of models.

Students can pose one or several treatment plans depending on the diagnosis.

Students will be able to do a periodontal abscess, a treatment for periodontal scaling and root planing.

They will have the skills to perform a simple exodontia (dental extraction).

Students will be able to finalise a root canal treatment (uniradicular or biradicular).

Students will be prepared for filling cavities regarding dental surgery. They should also know how to handle composites and dentin bonding systems.

They will perform reconstructions of teeth undergoing endodontic treatment.

Students will know the steps to be followed when carving teeth and do dental preparations in order to host crowns, bridges and laminated fronts. They will execute captures with elastomeric materials. Fitting of prosthesis and their cementation.

Students will design removable prosthesis and their clinical sessions.

Students will know the maintenance and review procedures of several treatments used.

Students will know how to prescribe pharmacological treatments when necessary.

DESCRIPTION OF CONTENTS

1. Integrated Dentistry Service for Adults

In each clinical session, students will have an appointment with a patient. For that, each one of them will work as an operator for 2 hours and will be helped by his/her box partner. In the next 2 hours, both of them will exchange their functions as operator and assistant.

After the first clinical visit, students will present a diagnosis and a treatment plan for each patient in a written form, and once the professor approves it, they should incorporate it on the software programme of the Dental Clinic.

Students will work coordinating with their assigned professor so that they can be supervised and assisted in each clinical step of a treatment.

Steps which need to be followed in order to perform several treatment plans will be specified in clinical sessions previous to clinical practice.

WORKLOAD

ACTIVITAT	Hours	% To be attended
Odontology practices	280.00	100
Study and independent work	44.00	0
Preparation of practical classes and problem	42.00	0
Resolution of case studies	124.00	0
TOTAL	490.00	

TEACHING METHODOLOGY

In each clinical session, students will have an appointment with a patient. For that, each one of them will work as an operator for 2 hours and will be helped by his/her box partner. In the next 2 hours, both of them will exchange their functions as operator and assistant.

After the first clinical visit, students will present a diagnosis and a treatment plan for each patient in a written form, and once the professor approves it, they should incorporate it on the software programme of the Dental Clinic.

Students will work coordinating with their practicum professor so that they can be supervised and assisted in each clinical step followed in treatments.

Steps which need to be followed in order to perform several treatment plans will be specified in clinical sessions at the beginning of each clinical practice.

Students will have to attend clinical sessions on Clinical Pharmacology (20 hours).

EVALUATION

Practicum II Service for Adults: Evaluation criteria.

60% CLINICAL PRACTISE: continuous evaluation, carried by the professor, of the attitudes and aptitudes, as well as of skills students have developed throughout the practicum in the academic course.

The professor will track the different treatments students make use of in this personal note book, informing students of the appropriate and inappropriate attitudes and procedures.

Students will fail the practicum if they miss more than 3 attendances. It is essential that students pass with a score of 50% in the clinical practicum in order to have access to an average with the written exam on clinical cases.

Failing the practicum implies that students need to repeat their practicum in the next academic year.

In case the professor's assessment regarding the clinical practicum during the first semester of the course is positive, and the student is bound to apply for an Extraordinary Call in the End of the Degree, they will be able to take the written test in the exam period which is set for the month of January.

40% WRITTEN EXAM CLINICAL CASES: students who obtain a score of 50% in the clinical practicum will be able to take the written exam in which they will have to answer 10 clinical situations that may be presented using slides, and 2 cases regarding Clinical Pharmacology (they have 2 hours to complete it). Students need to obtain 50% correct in such test, both in clinical cases and clinical pharmacology ones, in order to average with the mark obtained in the clinical practicum. In case of failing the exam, they can retake it in July.

In this subject students will not be allowed to write their test (or even take it before the agreed date) if they have not completed their practicum.

In order to access to an advance on the call of this subject, it is a requirement that the student has coursed all his/her practices.
