

**COURSE DATA****Data Subject**

Code	36377
Name	Material and teams
Cycle	Grade
ECTS Credits	6.0
Academic year	2019 - 2020

Study (s)

Degree	Center	Acad. year	Period
1212 - Degree in Gastronomic Sciences	Faculty of Pharmacy and Food Sciences	2	Second term

Subject-matter

Degree	Subject-matter	Character
1212 - Degree in Gastronomic Sciences	17 - Food Technology	Obligatory

Coordination

Name	Department
JIMENEZ HERNANDEZ, NURIA	265 - Prev. Medicine, Public Health, Food Sc.,Toxic. and For. Med.
SOLER QUILES, CARLA MARIA	265 - Prev. Medicine, Public Health, Food Sc.,Toxic. and For. Med.

SUMMARY

English version is not available

PREVIOUS KNOWLEDGE**Relationship to other subjects of the same degree**

There are no specified enrollment restrictions with other subjects of the curriculum.

Other requirements

Recommended previous knowledge of Food Technology

OUTCOMES

LEARNING OUTCOMES

- To know and evaluate critically the basic processes in the production, processing and preservation of food of animal and vegetable origin.
- To know the modifications suffered by foods as a result of technological processes.
- To know the main types of food industries.

DESCRIPTION OF CONTENTS

1. Food transformation by heat

Topic 1. Baking and roasting processes. Equipment.

Topic 2: Frying and grilling processes. Types of oils for frying and equipment. Grilling: fundamentals and applications.

Topic 3. Microwave cooking. I industrial equipments and applications in food industry.

2. Food preservation by thermal processing

Topic 4. Installations for heat processing and applications. Pasteurization and sterilization equipment for batch processing of foods. Continuous processing and aseptic packaging. New heating technologies.

Topic 5. Applications of heat in the food industry. New systems.

3. Food cold preservation by cold

Topic 6. Chilling systems. Shelf life of refrigerated food and safety and quality issues. Others applications in the food industry.

Topic 7. Food Preservation by Freezing. Mode of preserving action. Effects of freezing and frozen storage on the quality of foods. Thawing process.

Topic 8. Food Freezing Methods. Industrial Freezing Production. Equipment and Methodology for freezing foods. Description of Storage Cameras for refrigerated and frozen foods.

4. Food preservation by water depression

Topic 9. Food drying. Food drying basic principles and objectives. Psychrometric notions. Effects of moisture on solid properties. Thermal drying process.

Topic 10. Equipments and Methods for Drying. Principal characteristics of drying equipments. Classification of Drying Methods. Freeze-Drying Technique. Osmotic dehydration.

Topic 11. Food preservation by Concentration. Fundamentals of Food Concentration. Vacuum system for food concentration. Principal compounds of evaporators for food concentration. Multi-effect plate evaporators. Different types of evaporators used in the food industry. Freeze Concentration. Food Concentration by Reverse Osmosis.

5. Other preservation methods

Topic 12. Food preservation by modified-atmosphere. Use of modified-atmospheres for preserving food. Equipment and facilities. Future trends.

Topic 13. Food preservation by irradiation. Sources and equipments of ionizing irradiation. Applications of irradiation in foods. Technological problems and limitations of irradiation.

Topic 14. High hydrostatic pressures. Fundamentals of high hydrostatic pressures.. Facilities and current uses of high pressures in the food industry.

Topic 15. Pulse electric fields processing. Fundamentals of pulse electric fields processing. Commercial applications

Topic 16. Other emerging food preservation technologies. Ohmic heating. Light pulses. Ultrasound. Combined processes.

6. Packing and storing

Topic 17. Filling and packaging systems for food. The concept of packaging. Types of packaging. Packaging systems. Closure systems.

7. Food technology of vegetal and animal food.

Topic 18. Specific materials and equipments of food industry

WORKLOAD

ACTIVITY	Hours	% To be attended
Theory classes	30,00	100
Other activities	30,00	100
Study and independent work	90,00	0
TOTAL	150,00	

TEACHING METHODOLOGY

The theoretical teaching methodology will be based on the delivery of lectures along with the possible performance, presentation and defense of individual and collective reports. Classes are taught using audio-visual technical equipment. The student will have this material in the virtual classroom

In classroom practical classes problem and cases will be resolved taking place the specific application of knowledge that the students have acquired in the theory classes.

Seminars will be used to enhance teamwork and improve oral presentation, by performing theoretical and practical training to complement that is acquired in class work, and also for another series of complementary activities types varied.

Visits to centers of interest for the subject will be scheduled. The aim of them is to show in site day to day, process and facilities of a company to apply theoretical knowledge. To make the most of the experience, a previous study of the company will be asked, whenever possible, and the professor will address the doubts. At the end of the visit, a report will be delivered to the teacher.

EVALUATION

Written test to ensure knowledge and understanding of established theoretical minimum content for the subject (70%).

Continuous evaluation with the possible implementation, presentation and defense of individual and group reports on topics related to the contents explained and discussed during visits will be implanted. Assistance, the level of understanding of content and skills to their exposure, advocacy and discussion will be appreciated (20%). In addition, exams with questions about visits will be held (10%).

It is necessary to acquire 5 out of 10 points in the written test to pass the subject. Attendance at practices is mandatory to pass the subject.

ADDENDUM COVID-19

This addendum will only be activated if the health situation requires so and with the prior agreement of the Governing Council

1. Contenidos

Se mantienen los contenidos inicialmente recogidos en la guía docente ya que se impartió toda de manera presencial.

2. *Volumen de trabajo y planificación temporal de la docencia*

Las clases teóricas pudieron impartirse de forma presencial

Las visitas no pudieron realizarse, así que este peso se sustituye por actividades evaluables

3. *Metodología docente*

Presencial

4. *Evaluación*

Se realizará un cuestionario tipo test a través del aula virtual de 30 preguntas en 40 minutos. El resultado de este test hará media con otra prueba que se realizó antes del estado de alarma de manera presencial y contará un 50% de la nota.

Las actividades evaluables: resolución de cuestiones y de casos prácticos contarán un 50%.

Las visitas, que contaban un 10%, NO pudieron realizarse luego NO computan para la nota final.

5. *Bibliografía*
