Cycle	Grade
ECTS Credits	6.0
Academic year	2021 - 2022

Study (s)

Degree	Center	Acad. Period
1110 - Degree in Chemistry	Faculty of Chemistry	2 Second term

Subject-matter

Degree	Subject-matter	Character
1110 - Degree in Chemistry	9 - Organic Chemistry	Obligatory

Coordination

Name	Department
COSTERO NIETO, ANA MARIA	325 - Organic Chemistry

SUMMARY

Organic chemistry is the branch of chemistry that studies the structure and reactivity of carbon compounds, generally known as organic molecules. Among these molecules are found the most essential compounds for life, such as lipids, carbohydrates, amino acids, proteins and nucleic acids. Also organic molecules are many substances with which we come into direct contact, such as fuels, glues, paints or textile fibers. A large group of organic compounds are those that have pharmacological activity and that are the basis of medicines. Pesticides, fertilizers and herbicides have changed agriculture and preservatives have helped to modify our eating habits. Now, not all organic compounds are beneficial, there are many of them that are harmful to health or to the environment and therefore, it is necessary to continue preparing compounds with better properties to replace those that present problems.

The knowledge of the structure and reactivity of organic compounds has the purpose of opening ways for the preparation of compounds that maintain all their beneficial characteristics minimizing undesirable side effects.

The subject Organic Chemistry II is proposed as a continuation of knowledge acquired in Organic Chemistry I and will be complemented with Organic Chemistry III. Over all, they constitute the theoretical foundations of the Module of Organic Chemistry obligatory of the Degree in Chemistry and must be treated as a whole to show the perspective of the area that is intended to show the students.

The objectives that are intended to achieve in the subject can be summarized in the following points:

- Set the student's knowledge about the structure and bond in organic compounds.
- Study the different types of representation of organic molecules.
- Apply the general rules of nomenclature for organic compounds.
- Study the stereochemistry of organic compounds and the appropriate nomenclature rules.
- Identify the different functional groups present in organic molecules.
- Study the reactivity of the different functional groups that only contain carbon-heteroatom bonds.
- Study the methods of obtaining these functional groups.
- Study the mechanisms of the most important reactions in which these are involved functional groups.
- Design synthesis of organic compounds from certain starting products and that involve more than one reaction.

PREVIOUS KNOWLEDGE

Relationship to other subjects of the same degree

There are no specified enrollment restrictions with other subjects of the curriculum.

Other requirements

The study of Organic Chemistry is based on the knowledge acquired in the subjects of General Chemistry I and General Chemistry II.

In the same way, the study of the Organic Chemistry II is based on the knowledge acquired in the Organic Chemistry I.

OUTCOMES

1110 - Degree in Chemistry

- Develop capacity for analysis, synthesis and critical thinking.

- Show inductive and deductive reasoning ability.
- Demonstrate leadership and management skills, entrepreneurship, initiative, creativity, organization, planning, control, leadership, decision making and negotiation.
- Solve problems effectively.
- Demonstrate ability to communicate information, ideas, problems and solutions to both specialist and non-specialist audiences and using information technology, as appropriate.
- Demonstrate a commitment to ethics, equality values and social responsibility as a citizen and as a professional.
- Learn autonomously.
- Demonstrate the ability to adapt to new situations.
- Acquire a permanent sensitivity to quality, the environment, sustainable development and the prevention of occupational hazards.
- Demonstrate knowledge of the main aspects of chemical terminology, nomenclature, conventions and units.
- Interpret the variation of the characteristic properties of chemical elements according to the periodic table.
- Demonstrate knowledge of the main types of chemical reaction and their main characteristics.
- Demonstrate knowledge of the principles of thermodynamics and kinetics and their applications in chemistry.
- Ability to recognise chemical elements and their compounds: preparation, structure, reactivity, properties and applications.
- Demonstrate knowledge and understanding of essential facts, concepts, principles and theories related to the areas of chemistry.
- Solve qualitative and quantitative problems following previously developed models.
- Recognise and analyse new problems and plan strategies to solve them.
- Evaluate, interpret and synthesise chemical data and information.
- Recognise and evaluate chemical processes in daily life.
- Develop sustainable and environmentally friendly methods.
- Relate chemistry with other disciplines.
- Students must be able to apply their knowledge to their work or vocation in a professional manner and have acquired the competences required for the preparation and defence of arguments and for problem solving in their field of study.
- Students must have the ability to gather and interpret relevant data (usually in their field of study) to make judgements that take relevant social, scientific or ethical issues into consideration.
- Students must be able to communicate information, ideas, problems and solutions to both expert and lay audiences.

- Students must have developed the learning skills needed to undertake further study with a high degree of autonomy.
- Express oneself correctly, both orally and in writing, in any of the official languages of the Valencian Community.
- Have basic skills in the use of information and communication technology and properly manage the information obtained.

LEARNING OUTCOMES

The previous section includes the competences contained in the document VERIFICA. This subject addresses part of the learning results of the matter Organic Chemistry that allow to acquire specific knowledge of chemistry, cognitive skills and general skills recommended by the EUROPEAN CHEMISTRY THEMATIC NETWORK (ECTN) for the Chemistry Eurobachelor® Label. The following table lists the learning outcomes acquired in the subject Organic Chemistry II related to the competences of the degree in Chemistry.

SPECIFIC KNOWLEDGE OF CHEMISTRY	
The learning process should allow the degree graduates to demonstrate:	
	Competences of the subject Organic Chemistry II that contemplate the learning outcomes EUROBACHELOR®
The principal techniques of structural investigations, including spectroscopy	Ability to recognise chemical elements and their compounds: preparation, structure, reactivity, properties and applications..(CE7). Demonstrate knowledge of the principles, procedures and techniques for the determination, separation, identification and characterisation of chemical compounds.(CE8)
The structural features of chemical elements and their compounds, including stereochemistry.	Ability to recognise chemical elements and their compounds: preparation, structure, reactivity, properties and applications..(CE7). Relate the macroscopic properties and the properties of individual atoms and molecules, including macromolecules (natural and synthetic), polymers, colloids and other materials.CE11).

The properties of aliphatic, aromatic, heterocyclic and organometallic compounds.	Demonstrate knowledge of the main types of chemical reaction and their main characteristics.(CE4) Demonstrate knowledge of the principles, procedures and techniques for the determination, separation, identification and characterisation of chemical compounds.(CE8).
The nature and behaviour of functional groups in organic molecules	Demonstrate knowledge of the main types of chemical reaction and their main characteristics.(CE4) Ability to recognise chemical elements and their compounds: preparation, structure, reactivity, properties and applications..(CE7). Demonstrate knowledge of the principles, procedures and techniques for the determination, separation, identification and characterisation of chemical compounds.(CE8).

COMPETENCES AND COGNITIVE SKILLS

The learning process should allow the degree graduates to demonstrate:

	Competences of the subject Organic Chemistry II that contemplate the learning outcomes EUROBACHELOR®
Ability to demonstrate knowledge and understanding of the facts, concepts, principles and fundamental theories related to the topics mentioned above.	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories related to the areas of chemistry..(CE13).
Ability to apply this knowledge and understanding to the solution of common qualitative and quantitative problems.	Solve qualitative and quantitative problems following previously developed models..(CE14). Recognise and analyse new problems and plan strategies to solve them..(CE15). Understand the qualitative and quantitative aspects of chemical problems..(CE24).

COMPETENCES AND COGNITIVE SKILLS RELATED TO THE PRACTICE OF CHEMISTRY	
The learning process should allow the degree graduates to demonstrate:	
	Competences of the subject Organic Chemistry II that contemplate the learning outcomes EUROBACHELOR®
GENERAL COMPETENCES	
The learning process should allow the degree graduates to demonstrate:	
	Competences of the subject Organic Chemistry II that contemplate the learning outcomes EUROBACHELOR®
Ability to apply practical knowledge to solve problems related to qualitative and quantitative information.	Solve problems effectively..(CG4). Solve qualitative and quantitative problems following previously developed models..(CE14). Relate theory and experimentation..(CE22). Recognise and evaluate chemical processes in daily life..(CE23). Understand the qualitative and quantitative aspects of chemical problems..(CE24).
Competences in information management, in relation to primary and secondary sources, including information retrieval through on-line searches.	Demonstrate ability to communicate information, ideas, problems and solutions to both specialist and non-specialist audiences and using information technology, as appropriate..(CG6). Have basic skills in the use of information and communication technology and properly manage the information obtained.(CT2).

Interpersonal skills to interact with other people and get involved in team work.	Demonstrate ability to work in teams both in interdisciplinary teams and in an international context..(CG5). Demonstrate a commitment to ethics, equality values and social responsibility as a citizen and as a professional. (CG7). Demonstrate the ability to adapt to new situations..(CG9).
---	--

DESCRIPTION OF CONTENTS

1. Conjugated compounds and ultraviolet spectroscopy

Stability of conjugated dienes: theory of molecular orbitals. Electrophilic additions to conjugated dienes: allylic carbocations. Kinetic and thermodynamic control of the reactions. The Diels Alder's cycloaddition reaction. Diene polymers: synthetic and natural rubbers. Interpretation of ultraviolet spectra: the effect of conjugation. Conjugation, color and the chemistry of vision

2. Benzene and aromaticity. Aromatic electrophilic substitution

Names and sources of aromatic compounds. Structure and stability of benzene. Aromaticity and the Hückel rule of $4n + 2$ electrons. Aromatic ions. Polycyclic aromatic compounds. Spectroscopy of aromatic compounds. Electrophilic aromatic substitution reactions: bromination. Other aromatic substitutions Alkylation and acylation of aromatic rings: Friedel-Crafts reaction. The effect of substituents on substituted aromatic rings. An explanation of the effect of substituents. Trisubstituted benzenes: additivity of the effects. Aromatic nucleophilic substitution. Benzyne. Oxidation of aromatic compounds. Reduction of aromatic compounds. Synthesis of polysubstituted benzenes.

3. Hydroxyl functional group: alcohols and phenols

Nomenclature and properties of alcohols and phenols. Alcohols as acids and bases. Formation of alkoxydes. Preparation of alcohols from carbonyl compounds: reduction. Preparation of alcohols from Grignard reagents. Alcohol reactions with strong acids: substitution and elimination processes through alkyl oxonium ions. Transpositions. Transformation of alcohols into alkyl halides by reaction with thionyl chloride and phosphorus tribromide. Oxidation of alcohols. Protection of alcohols. Phenols and their uses. Reactions of phenols. Spectroscopy of alcohols and phenols.

**4. Ethers and epoxides. Thioles and sulfurs.**

Nomenclature. Structure and physical properties of ethers. Synthesis of ethers from alcohols and mineral acids. Williamson synthesis of ethers. Reactions with strong acids. Claisen transposition of ethers. Cyclic ethers: epoxides. Opening of epoxides. Crown ethers. Thiols and sulfides: physical and chemical properties. Ethers spectroscopy.

5. Aldehydes and ketones: nucleophilic addition reactions

Nomenclature of aldehydes and ketones. Structure of the carbonyl group. Physical properties of aldehydes and ketones. Preparation of aldehydes and ketones from alcohols. Reactivity of the carbonyl group: nucleophilic addition mechanisms. Addition of water to form hydrates. Addition of hydrogen cyanide to give cyanohydrins. Addition of alcohols to form acetals and hemiacetals. Acetals as protective groups. Nucleophilic addition of ammonia and its derivatives. Reactions with organometallic compounds: preparation of alcohols. Reduction of carbonyl compounds: catalytic hydrogenation and reductions with metal hydrides. Deoxygenation of the carbonyl group. Oxidation of aldehydes and ketones. Spectroscopy of aldehydes and ketones.

6. Carboxylic acids and derivatives

Nomenclature of carboxylic acids. Structural and physical properties of carboxylic acids. Acidic and basic nature of carboxylic acids. Preparation of carboxylic acids. Substitution in carboxylic carbon: addition-elimination mechanism. Reactions of carboxylic acids. Nomenclature and properties of carboxylic acid derivatives. Acyl nucleophilic substitution reactions. Alkanoyl halides, anhydrides, esters, amides and nitriles. Relative reactivities and structural characteristics of carboxylic acid derivatives. Preparation of the acid derivatives from the corresponding acids. Chemistry of alkanoyl halides, anhydrides and esters: hydrolysis reactions, reactions with other nucleophiles and reduction reactions. Amides: similarities and differences with the other carboxylic acid derivatives. Reactions of nitriles: hydrolysis, reduction and reaction with organo-metals. Spectroscopy of carboxylic acids and derivatives.

7. Substitution reactions in alpha position of the carbonyl group

Acidity of the hydrogens in alpha of aldehydes and ketones: enolate ions. Keto-enol tautomería. Halogenation in alpha of aldehydes and ketones. Bromination in alpha of carboxylic acids. Enolate formation: alkylation. Aldol condensation. Dehydration of aldols: synthesis of enones. Uses of the aldol reaction in synthesis. Crossed aldol condensation. Intramolecular aldol condensation. Condensing of Claisen. Condensing of mixed Claisen. Intramolecular Claisen condensation: Dieckmann reaction. Enoliation of beta-dicarbonyl compounds: stability and reactivity of their enolate anions. Decarboxylation of beta-ketoacids. Malonic synthesis and acetoacetic synthesis.

**8. Amines. Other nitrogen-containing compounds**

Nomenclature of amines. Structure and physical properties of amines. Acidity and basicity of amines. Formation of amines by alkylation reactions. Quaternary ammonium salts: Hofmann elimination. Synthesis of Gabriel. Synthesis of amines from other nitrogen compounds. Synthesis of amines by reductive amination. Synthesis of amines from carboxylic acid derivatives. Characteristics of aromatic amines. Reactions of arylamines. Other nitrogen-containing functional groups. Amine spectroscopy.

WORKLOAD

ACTIVITY	Hours	% To be attended
Theory classes	51,00	100
Tutorials	9,00	100
Study and independent work	90,00	0
TOTAL	150,00	

TEACHING METHODOLOGY

The subject is designed so that the student is the protagonist of his/her own learning. The subject structure is:

- Theory classes and questions.- Theory lessons will introduce the students to the most fundamental aspects of the subject. The question sessions will be dedicated to the application of the specific knowledge that students have acquired in theory classes. Students must have previously worked on the questions to be solved. The answers will be discussed in class by both the teacher and the students. The classes should be complemented by personal study time.
- Tutoring.- In them the overall learning process of the students will be evaluated. In the tutorial sessions the professor could entrust written reports to the students. Furthermore, the tutorials will serve to solve any doubts that may have arisen during the classes and guide students on the most convenient work methods.
- Seminars-Talks: The Seminars-Talks will deal with complementary aspects of their formation in Organic Chemistry and will be dedicated to the presentation by a specialist of a relevant topic in current Chemistry. For this task, students will attend the event and answer a questionnaire prepared by the teacher.

EVALUATION

For learning assessment, the teacher can use two modalities. The student must opt for one of them and communicate his choice to the secretary of the department according to the written form available. The student must communicate the preferred modality during the first month of the semester. On behalf of the teacher's programming, the student will be evaluated with the B modality if there is no communication within this first month period.

The minimum global qualification to pass the subject in any modality will be 5 points out of 10.

FIRST CALL

Modality A

Continuous evaluation through the course. In this case, the following sections will be considered:

1. Direct evaluation by the teacher (5%): this evaluation will take into account different aspects, among which include:

Assistance and reasoned and clear participation in the discussions and questions in the class

Progress in the use of the language specific to organic chemistry

Troubleshooting and raising doubts

Critical spirit

2. Tutorials and Seminars (globally 15%): In this section the following aspects will be considered:

Assistance

Content and written presentation of the exercises proposed by the teacher (if applicable).

Rational and clear participation in the discussions.

3. Exams (80%): will be held on the date indicated by the Faculty and will be common to all groups of the subject. It will consist of theoretical and practical questions related to the subject explained during the teaching period. The global passing of the subject will necessarily entail having obtained a minimum score of 5 out of 10 points on the exam.

Modality B

Evaluation with only a written exam on the contents of the subject dealt with in theory classes and tutorials, so that the teacher can thus assess whether the student has acquired the skills and knowledge related to the subject. This exam will be 100% of the overall score.

The exam will be held on the date indicated by the Faculty and will be common to all groups of the subject. In this modality, the teacher may take into account the participation of students in theory classes and tutorials for the final grade.

SECOND CALL

In the second call evaluation for students who have chosen modality A, the grade obtained by the student in the first call for sections 1 and 2 will be maintained but, section 3 will be re-evaluated.

ADDENDUM COVID-19

This addendum will only be activated if the health situation requires so and with the prior agreement of the Governing Council

Contents

The contents initially indicated in the teaching guide are maintained.

Workload and temporary teaching planning

Regarding the workload:

Theoretical class activities and seminars are maintained as described in the teaching guide. In tutoring it will be the teacher's power to spend a few hours performing evaluable tasks. In the tutorials, it will be the teacher's authority to undertake some hours in the realization of assessable tasks.

Regarding the temporary teaching planning:

The material to follow the theory/tutoring/classroom-seminar classes allows to continue the temporary teaching planning both in days and schedule, whether the teaching is face-to-face in the classroom or not.

The material for the follow-up of the theory classes / tutorials / classroom seminars allows to continue with the teaching time planning both on days and on schedule, whether the teaching is face-to-face in the classroom or not.

Teaching Methodology

Situation of minimal attendance: In theory classes and tutorials the occupation will be, at most, 30% of their usual occupation. Teaching will be online. Students who have a laboratory session before or after theory classes, and the time to travel is longer than the time established in the schedules, will be able to follow the class in person in the classroom assigned in the schedules. When there are students in this situation, classes will be taught by synchronous videoconference in the group classroom.

Maximum face-to-face situation: In theory classes and tutorials, the occupation will respect the sanitary restrictions that limit the capacity of the classrooms. Depending on the capacity of the classroom and the number of students enrolled, it may be necessary that part of the students have to follow the classes synchronously. If this situation arises, the students will attend the group classroom in weekly rotating shifts (preferably in alphabetical order), so as to ensure that the percentage of attendance of all the students enrolled in the subject is the same.

Confinement situation: If for health reasons it is not possible to continue with hybrid teaching, totally or partially affecting the classes of the subject, these will be replaced by synchronous non-face-to-face sessions following the established schedules and using the virtual classroom tools.

If there is a closure of the facilities for health reasons that totally or partially affects the classes of the course, they will be replaced by non-face-to-face sessions following the established schedules and using the tools of the virtual classroom.

In the case of students confined to home due to COVID, they will be ensured on-line teaching through Teams.

Evaluation

The evaluation system described in the Teaching Guide of the subject in which the various evaluable activities have been specified as well as their contribution to the final grade of the subject is maintained. The continuous evaluation modality will be strengthened (Modality A). In the case of students who, for exceptional reasons, cannot follow this evaluation modality, they will be able to opt for the evaluation with a single exam (Modality B). In this case, because of the especial conditions due to the pandemic, the student must notify this election before the first month of the course by sending an email to the secretariat of the Department (secorgan@uv.es) and the teacher of the subject.

If there is a closure of the facilities for sanitary reasons, the two evaluation modalities that are included in the teaching guide of the subject will be maintained with the following modifications:

Mode A.

Continuous evaluation throughout the course

1. Seminars, Tutorials and Tasks (globally up to 35%): The following aspects may be taken into account in each student's note in this section:

Assistance and participation

Content and written presentation of the exercises proposed by the teacher (if any)

Reasoned and clear participation in the discussions raised

Results obtained in the tasks performed

1. Examination (a minimum of 65%): will be carried out on the date indicated by the Faculty and will be common for all groups of the subject. It will consist of theoretical and practical questions related to the subject matter explained during the teaching period. To pass the subject it is necessary to obtain in the exam a minimum score of 5 points out of the 10 totals of the exam.

Exam (a minimum of 65%): it will take place on the date indicated by the Faculty and will be common for all groups of the subject. It will consist of theoretical and practical questions related to the matter explained during the teaching period. To pass the subject it is necessary to obtain in the exam a minimum score of 5 points out of the 10 total of the exam.

**Mode B**

Evaluation only with a written examination of the contents of the subject covered in the theory classes, tutoring and seminars, in such a way that the teacher can evaluate if the student has acquired the skills and knowledge related to the subject. This exam will be 100% overall rating. It will be done on the date indicated by the Faculty and will be common for all groups of the subject. It will consist of theoretical and practical questions related to the subject matter explained during the teaching period. The overall pass of the subject will necessarily imply having obtained in the exam a minimum score of 5 points out of the 10 totals of the exam

In this modality, the teacher may take into account in the final note the participation of the student in the classes of theory, tutoring and seminars. The exam will be carried out using the tools of the Virtual Classroom

The overall passing of the subject will necessarily imply having obtained in the exam a minimum score of 5 points out of the 10 total of the exam

In this mode, the teacher may take into account in the final grade the student's participation in theory classes, tutorials and seminars. The exam will be carried out using the tools of the Virtual Classroom

The continuous evaluation modality will be strengthened (Modality A).
