

Course Guide 43248 Paleodiversity and vertebrate evolution

COURSE DATA

Data Subject					
Code	43248				
Name	Paleodiversity and vertebrate evolution				
Cycle	Master's degree				
ECTS Credits	3.0				
Academic year	2021 - 2022				
Study (s)					
Degree		Center		Acad. Period year	
2148 - M.D. in Biodi and Evolution	iversity: Conservation	Faculty of Biolog	gical Sciences	1 Second term	
Subject-matter					
Degree		Subject-matter	11. S7411	Character	
2148 - M.D. in Biodiversity: Conservation and Evolution		5 - Cross-disciplinary optional subject areas 1		Optional	
Coordination					
Name		Department			
MARTINEZ PEREZ, CARLOS		356 - Botany and Geology			
MONTOYA BELLO, PLINIO		356 - Botany and Geology			

SUMMARY

This subject, of a theoretical-practical nature, is taught in the second semester of the master's degree. It provides an overview of the fossil record of the main groups of vertebrates, including hominids. It provides information on the conservation processes that have given rise to their rich and diverse record, and introduces students to the morphological evolution of vertebrates, as well as the main facts of their palaeobiogeographical history. Finally, information will be provided on the main vertebrate palaeontological sites in the fossil record of the Iberian Peninsula and, especially, of the Valencian Community. The practical part includes visits to museums (such as the Museo Paleontologico de Alpuente) and, if possible, a visit to a vertebrate palaeontological site. It also deals with the observation and functional significance of the main morphological characters of bones and teeth, as well as the interpretation of taphonomic information. Furthermore, the techniques of excavation, preparation and conservation of vertebrate fossils are covered, including the treatment of sediment samples to obtain microvertebrates. In this way, the student will gain knowledge of the main techniques for the recovery of fossil vertebrates. Likewise, importance is given to attending lectures and seminars related to the subject.

Course Guide 43248 Paleodiversity and vertebrate evolution

Vniver§itatö́ ®València

PREVIOUS KNOWLEDGE

Relationship to other subjects of the same degree

There are no specified enrollment restrictions with other subjects of the curriculum.

Other requirements

There are no enrolment restrictions with other subjects in the syllabus. However, it is advisable to have a minimum knowledge of Zoology, Ecology, as well as general Geology and Palaeontology.

OUTCOMES

2148 - M.D. in Biodiversity: Conservation and Evolution

- Students should apply acquired knowledge to solve problems in unfamiliar contexts within their field of study, including multidisciplinary scenarios.
- Students should be able to integrate knowledge and address the complexity of making informed judgments based on incomplete or limited information, including reflections on the social and ethical responsibilities associated with the application of their knowledge and judgments.
- Students should communicate conclusions and underlying knowledge clearly and unambiguously to both specialized and non-specialized audiences.
- Students should demonstrate self-directed learning skills for continued academic growth.
- To acquire basic skills to develop laboratory work in biomedical research.
- Be able to make quick and effective decisions in professional or research practice.
- Be able to access the information required (databases, scientific articles, etc.) and to interpret and use it sensibly.
- Students should possess and understand foundational knowledge that enables original thinking and research in the field.
- Be able to access to information tools in other areas of knowledge and use them properly.
- To be able to assess the need to complete the scientific, historical, language, informatics, literature, ethics, social and human background in general, attending conferences, courses or doing complementary activities, self-assessing the contribution of these activities towards a comprehensive development.
- Favour intellectual curiosity and encourage responsibility for one's own learning.
- Encourage ethical commitment and environmental awareness.
- Be able to communicate and disseminate scientific ideas.

Course Guide 43248 Paleodiversity and vertebrate evolution

Vniver§itat \vec{b} d València

LEARNING OUTCOMES

- To understand the defining features of vertebrates and how these features influence their own preservation in the fossil record.

- To know the main groups of fossil vertebrates.
- To know the main facts of the evolutionary and biogeographical history of vertebrates.
- To know the application of vertebrates in biostratigraphy.
- To understand the role played by vertebrates in past ecosystems.
- Understand the place of hominids, and the human species in particular, in the history of life.

- To know the main sites of fossil vertebrates in the Iberian Peninsula and, especially, in the Valencian Community.

- To understand the importance of conserving this palaeontological heritage.

- To know the main palaeontological techniques of excavation, recovery, preparation and conservation of fossil vertebrates.

DESCRIPTION OF CONTENTS

1. Theoretical Block

Unit 1. Introduction to vertebrates. Biomorphodynamics and comparative anatomy of the skeleton. History of knowledge about fossil vertebrates.

Unit 2. Taphonomy of vertebrates. Types of sites. Exceptional conservation. Taphonomy and palaeobiology. Quantitative methods.

Unit 3. Origin of chordates. The first vertebrates: agnates. Ostracoderms.

Unit 4. Fishes: placoderms, acanthodians, chondrichthyans, osteichthyans (sarcopterygians and actinopterygians).

Unit 5. Adaptations to the terrestrial environment. Origin and diversification of the tetrapod model. Amphibians and origin of amniotes.

Unit 6. Reptiles. Synapsids (pelycosaurids and therapsids). Anapsids (chelonians). Diapsids. Marine and flying reptiles of the Mesozoic.

Unit 7. Dinosaurs. Saurischians (theropods and sauropodomorphs). Ornithischians. The great extinction of the Cretaceous-Tertiary boundary.

Unit 8. Birds. Origin and adaptation to the aerial environment. The large carnivorous flightless birds.

Unit 9. Mammals. Origin and Mesozoic mammals. The radiations of the Cenozoic.

Unit 10. Primates. Origin. Non-hominoid primates.

Unit 11. Hominids and hominoids of the Miocene. Homininae. Anatomical consequences of bipedalism.

Unit 12. Introduction to vertebrate palaeobiogeography.

Unit 13. Palaeoecology: Prehistoric vertebrates and terrestrial ecosystems. Estimates of body mass. Nutrition: isotopes and trace elements.

Unit 14. Fossil vertebrates of the Iberian Peninsula. Main sites in the Valencian Community. Patrimonial

Vniver&itatÿdValència

problems.

Unit 15. Vertebrate applications in biostratigraphy.

2. Practical Block

Practical 1. Anatomy of vertebrate bones and teeth.

Practical 2. Vertebrate taphonomy.

Practical 3. Techniques for the recovery and preparation of fossil vertebrates.

Practical 4. Field work.

WORKLOAD

ACTIVITY	Hours	% To be attended
Theory classes	20,00	100
Laboratory practices	10,00	100
Attendance at events and external activities	2,00	0
Development of group work	5,00	0
Development of individual work	4,00	0
Study and independent work	8,00	0
Readings supplementary material	4,00	0
Preparation of evaluation activities	10,00	0
Preparing lectures	6,00	0
Preparation of practical classes and problem	4,00	0
Resolution of case studies	2,00	0
TOTAL	75,00	

TEACHING METHODOLOGY

- Lectures, given by the lecturer, to provide the basic knowledge and methodology to be used.

- Practical laboratory classes, focused on the application of some of the concepts introduced in the theoretical classes.

- A field practical, consisting of a visit to museums or palaeontological site, with a preliminary introduction by the teacher and, subsequently, a work or seminar by the students on the results of the visit.

- The set of knowledge covered in the theoretical and practical classes will be assessed by means of the development and public defense of a poster.

Vniver§itatõtdValència

- Individual or group use of materials prepared or referenced by the teacher for the elaboration of work by the students. Students must carry out a theoretical work on a topic from a list of topics suggested by the teacher. It will be based mainly on bibliographical data without excluding the possibility of incorporating experimental data. The work carried out by the students will be dealt with in class in the form of seminars.

- Face-to-face tutorials, individual or in groups, with the lecturer to supervise the work carried out by the students.

- Participation in seminars developed by the students themselves, attendance at external seminars, conferences, visits to museums and other activities.

- Use of the virtual classroom as a communication tool.

EVALUATION

- Test (oral presentation) that are carried out, individually or in groups, throughout the semester for the evaluation of the technical competences of the subject, and whose contribution to the final grade may not exceed 70% of the total.

- Attendance and use of the classes

- Report on the practicals and field trips activities.

Assessment activities Weighting

Final exam 70%.

Practicals/laboratory/field work reports 20%

Continuous assessment 10%.

ADDENDUM COVID-19

This addendum will only be activated if the health situation requires so and with the prior agreement of the Governing Council

English version is not available

1. Contenidos

Se mantiene el peso de las distintas actividades que suman las horas de dedicación en créditos ECTS marcadas en la guía docente original.

2. Volumen de trabajo y planificación temporal de la docencia

No se plantean modificaciones ni el volumen de trabajo ni la planificación de ninguna de las actividades presenciales originales.

3. Metodología docente

En el caso de tener que pasar a una docencia semipresencial o no-presencial, las clases presenciales se sustituirán por videoconferencia mediante la creación de tareas "Videoconferencia" en el aula virtual y ejecución de estas por *Blackboard Collaborate* el día y a la hora de la clase presencial.

La asignatura tiene una tercera parte eminentemente práctica por lo que al igual que las clases teóricas, estas prácticas se sustituirán por pdfs, powerpoints, o vídeos que se colgarán en del aula virtual. Además, aquellos temas que requieran de bibliografía complementaria o de apoyo, se pondrá a disposicion de los alumnos a traves del aula (en pdf), en el tema correspondiente.

Por último, las salidas prácticas originales, si no pudieran realizarse, se sustituirán por visitas virtuales, completadas con aplicaciones tipo *Google maps* y *Street viewer*, material complementario y powerpoints con explicaciones de los contenidos que se verían en la salida de campo.

4. Evaluación

Se mantiene el peso de los diferentes ítems evaluables tal y como está detallado en la guía docente. El trabajo final se enviará a través del correo electrónico o como una tarea en el aula virtual. La exposición del trabajo se hara de forma oral a través de las herramientas del aula virtual, como el sistema de videoconferencia por *Blackboard Collaborate*.

5. Bibliografía

La bibliografía recomendada se mantiene porque es accesible.
