| ZUÑIGA ROMAN, JUAN | 180 - Atomic, Molecular and Nuclear Physics |

SUMMARY

This subject represents the first contact of the student with the research work and is addressed to measure the maturity of the student to abord a research problem in the field of physics. Master's Thesis work will be under the supervision of a director of Master's Thesis, and it will deal with one topic related to the research lines offered by the research groups involved in the Master in Advanced Physics and the Physics PhD program.

The subject of the Master Thesis will be in close connection with the specialty and the learning path followed by the student. The content of the Master Thesis must be a deep study of a topic of interest of the specialty. It could be either a research work on a specific topic (theoretical, experimental, educational, etc..), or a exploratory work on one or several hot issues in the scientific community, either theoretical or experimental.

PREVIOUS KNOWLEDGE

Relationship to other subjects of the same degree

There are no specified enrollment restrictions with other subjects of the curriculum.

Other requirements

OUTCOMES

2150 - M.D. in Advanced Physics

- Students should apply acquired knowledge to solve problems in unfamiliar contexts within their field of study, including multidisciplinary scenarios.
- Students should be able to integrate knowledge and address the complexity of making informed judgments based on incomplete or limited information, including reflections on the social and ethical responsibilities associated with the application of their knowledge and judgments.
- Students should communicate conclusions and underlying knowledge clearly and unambiguously to both specialized and non-specialized audiences.
- Students should demonstrate self-directed learning skills for continued academic growth.
- Students should possess and understand foundational knowledge that enables original thinking and research in the field.
- Ser capaz de gestionar información de distintas fuentes bibliográficas especializadas utilizando principalmente bases de datos y publicaciones internacionales en lengua inglesa.
- Saber organizarse para planificar y desarrollar el trabajo dentro de un equipo con eficacia y eficiencia.
- Ostentar la preparación para tomar decisiones correctas en la elección de tareas y en su ordenación temporal en su labor investigadora y/o profesional.
- Poseer la capacidad para el desarrollo de una aptitud crítica ante el aprendizaje que le lleve a plantearse nuevos problemas desde perspectivas no convencionales.
- Estar en disposición para seguir los estudios de doctorado y la realización de un proyecto de tesis doctoral.
- Comprender de una forma sistemática el campo de estudio de la Física y el dominio de las habilidades y métodos de investigación relacionados con dicho campo.

- Concebir, diseñar, poner en práctica y adoptar un proceso sustancial de investigación con seriedad académica.
- Realizar un análisis crítico, evaluación y síntesis de ideas nuevas y complejas en el área de la Física.
- Analizar una situación compleja extrayendo cuales son las cantidades físicas relevantes y ser capaz de reducirla a un modelo parametrizado.
- Evaluar la validez de un modelo o teoría propuesto por otros miembros de la comunidad científica.
- Saber modelizar matemáticamente los problemas físicos sencillos nuevos, conectados con problemas conocidos. Ser capaz de expresar en términos matemáticos nuevas ideas.
- Elaborar una memoria clara y concisa de los resultados de su trabajo y de las conclusiones obtenidas en el área de la Física.
- Exponer y defender públicamente el desarrollo, resultados y conclusiones de su trabajo en el área de la Física.
- Ser capaz de aplicar la experiencia investigadora adquirida para iniciar el desarrollo de la fase investigadora de un programa de doctorado en temas relacionados con la Física y aplicaciones tecnológicas afines.

LEARNING OUTCOMES

At the end of the teaching-learning process the student should be able to:

1. Carry out a research project within a line of research in a specialty of the Master.
2. Use sources of information, scientific databases, abstracts, full articles, documentation, etc.. both traditional and electronic format, necessary to have a clear view of the history, originality, interest and viability of a particular study.
3. Develop a clear and concise report of work performed and the results obtained in the research.
4. Present and defend a clear and concise, to a specialized audience, development, results and conclusions of a research work.
5. Demonstrate by performing the tasks of a research work, the ability to apply gained research experience in the planning and implementation of future studies within the field of physics or related fields.

DESCRIPTION OF CONTENTS

1. Master Thesis

This matter is thought to mean a first contact of the student with research and try to measure the maturity of the student to address a research problem in the area of Physics. Master Thesis work is under the supervision of the director of the Master's Thesis, and will be connected to one of the lines of research that are listed in section 6 and are offered by the research groups involved in the Advanced Master in Physics and Physics Doctorate Program.

The theme of the work will be in close connection with the specialty and the training route followed by the student. The object of it is to be in-depth study of a topic of interest of their specialty. It includes both the research on a specific topic with a theoretical, experimental, educational, etc. guidance, as the modality of exploratory work on one or more appealing topics in the scientific community, whether theoretical or experimental.

WORKLOAD

| ACTIVITY | Hours | % To be attended |
|--------------------------------|---------------|------------------|
| Theory classes | 180,00 | 100 |
| Development of a final project | 270,00 | 0 |
| TOTAL | 450,00 | |

TEACHING METHODOLOGY

Master's Thesis. Students will do a research job in collaboration with a research group. They have to prepare a Master Thesis that will be presented and defended in a public session

The CCA of the Master in Advanced Physics recommends that the presentation of the Master's Thesis lasts about 20 minutes and that the debate does not exceed 20 minutes.

Students can write and defend the Master's Thesis and its presentation in Spanish, Valencian or English.

EVALUATION

The evaluation of the course will be based on:

Oral presentation of the Master's Thesis.

Report of the Master's Thesis presented.
