Code	43473
Name	Educational principles 1
Cycle	Master's degree
ECTS Credits	9.0
Academic year	2023 - 2024

Study (s)

Degree	Center	Acad. Period
2157 - M.D. in Research in Subject Didactics	Faculty of Teacher Training	1 First term

Subject-matter

Degree	Subject-matter	Character
2157 - M.D. in Research in Subject Didactics	1 - Fundamentals for research	Obligatory

Coordination

Name	Department
COLOMER RUBIO, JUAN CARLOS	90 - Methodology of experimental and social sciences
FERRANDO PALOMARES, IRENE	85 - Mathematics Education

SUMMARY

The subject Didactic Foundations 1, together with Didactic Foundations 2, aims to provide trainee researchers with the necessary foundations to carry out their research work. These subjects focus on interdisciplinary topics related to didactic research, such as the study of well-founded educational designs, gender research, culture and media literacy, teacher observation and high abilities, among others.

These foundations have been developed over years of research, especially in the last three decades, and are the result of enquiries into specific didactics. The didactic phenomena under investigation originate in teaching and learning activities in both formal and informal contexts. Once these phenomena have been identified, they can be addressed in further research.

These subjects complement the specific didactic training and allow students to acquire the necessary foundations to understand the current lines of research in different areas of knowledge that form part of the Master's syllabus

PREVIOUS KNOWLEDGE

Relationship to other subjects of the same degree

There are no specified enrollment restrictions with other subjects of the curriculum.

Other requirements

No enrolment restrictions with other subjects in the curriculum have been specified.

Other types of requirements

This subject does not require specific prior knowledge.

OUTCOMES

2157 - M.D. in Research in Subject Didactics

- Students should apply acquired knowledge to solve problems in unfamiliar contexts within their field of study, including multidisciplinary scenarios.
- Students should communicate conclusions and underlying knowledge clearly and unambiguously to both specialized and non-specialized audiences.
- Students should demonstrate self-directed learning skills for continued academic growth.
- Conocer y utilizar procedimientos básicos de investigación didáctica.
- Students should possess and understand foundational knowledge that enables original thinking and research in the field.
- Analyse and synthesise the main current research agendas in Specific Didactics.
- Integrate ethical values and responsibility associated with research tasks into one's own research.
- Create spaces for research and learning with special attention to equity, emotional and values education, equal rights and opportunities between men and women, citizenship training and respect for human rights that facilitate life in society, decision-making and the construction of a sustainable future.
- Evaluate current research problems on teaching or learning in the fields of knowledge characteristic of Specific Didactics.
- Synthesise historical, epistemological and ontological aspects associated with the emergence and evolution of research in Specific Didactics.
- Value the social importance of research in Specific Didactics and the need to apply the results of research to improve the quality of education and make it available to all citizens.

- Critically analyse, from the point of view of research in Specific Didactics, the performance of teaching, good practice and guidance using quality indicators.
- Develop and apply innovative teaching proposals in the field of specialisation in each specific didactic area.
- Understand and apply specialised research procedures in Specific Didactics.
- Analyse current tools and methods used in didactic research in order to develop didactic units for innovation and research in the classroom.
- Identify, analyse and evaluate national or international research publications in the field of Specific Didactics.

LEARNING OUTCOMES

The subjects Didactic Foundations 1 and Didactic Foundations 2 should provide students with the necessary didactic knowledge that will enable them to know the theoretical frameworks and didactic contexts in which to frame research in specific didactics. These subjects complement the knowledge acquired in the specialised subjects and allow students to reflect on the links and divergences between their specialisation and other specific didactics. It is expected that those who take these two subjects will have achieved, at the end of the course and always in relation to their own specific didactics:

- To know the interdisciplinary thematic frameworks that make up research in specific didactics.
- Justify the interest of a research in didactics considering its insertion in the disciplinary contents of the official curricula of different educational levels or as a critical review of the absences in these curricula.
- Review the designs of classroom programmes and pedagogical proposals in different didactics. Identify learning and teaching problems in different didactics (processes, work strategies, contents and assessment systems...).
- Scientifically analyse teaching resources and other teaching materials of various types (textbooks, technological, computer and audiovisual resources, virtual spaces, networks, blogs and websites).
- Assess the usefulness of specific theoretical didactic frameworks for research or evaluation of teaching innovation proposals (identification of quality indexes or parameters) at different educational levels.

DESCRIPTION OF CONTENTS

1. Health, Gender Perspective, and Sustainability as a Framework for Teaching Action

2. Research on coeducational curriculum

**3. Culture and audiovisual literacy****4. Teacher knowledge, performance observation instruments, and giftedness****5. Reading and writing as learning tools****WORKLOAD**

ACTIVITY	Hours	% To be attended
Theory classes	72,00	100
Development of group work	20,00	0
Development of individual work	20,00	0
Study and independent work	90,00	0
Readings supplementary material	13,00	0
Preparation of evaluation activities	10,00	0
TOTAL	225,00	

TEACHING METHODOLOGY

Depending on the type of activity to be carried out, it may be used:

- Lectures by teachers (usually in theory classes). Discussion among students under the observation of the teacher, with or without the teacher's intervention (usually in seminars).
- Tutored or autonomous work, individually or in small groups for the realisation of projects, elaboration of materials, information research, etc. (generally in the laboratory or as non-face-to-face activities).
- Time for individual self-study or tutored study (generally to prepare assignments or to prepare for assessment tests).
- Presentation of the work done in front of teachers and/or other students (usually in seminars).
- Individual meetings with the tutor to monitor the progress of the child.

EVALUATION

Assessment will be continuous. Students who follow up the daily classroom activity (activities carried out during the non-recoverable face-to-face sessions) as well as the recoverable activities requested by the teaching staff, will be eligible for continuous assessment as long as their attendance exceeds 80% of the sessions.

In the case of not keeping track of the daily activities, students will pass to a final evaluation mode that will involve the delivery of an individual work and/or a written test (they will keep the grade of all the continuous evaluation activities that can be recovered and will keep the grade of those that cannot be recovered carried out in the classroom).

In the continuous assessment modality, the assessment will consist of the delivery of assignments for each of the knowledge areas taught in the module. It is essential to pass all of these assignments with at least a grade of 5.
