SUMMARY

This course is intended for students to understand the economic rationale of the integration processes of countries in the field of movement of goods, services and factors of production as well as in the financial sector. The most relevant integration experience at the international level (the European Union) will be analyzed in depth. The course starts with an overview of the EU both in its historical and institutional process to move to the analysis of both micro policies (agricultural policy, regional policy, competition policy, ...) and macro ones (monetary union, Stability Pact and Growth ...). Thus, a more accurate view of the economic environment in which we operate will be provided.
