### SUMMARY

4.5 ECTS compulsory subject in the first semester of the Master in Chemical Engineering, which is taught in Spanish. This course is part of the management and production optimization and sustainability module. It consists of 3 distinct thematic blocks in which the course is structured: Quality management, industrial safety and occupational risk prevention and management innovation.

The course contents are summarized as: quality, environment, PRL, quality management: business management standard scopes. Implementation and management system audits. Main risks and prevention measures. Implementing regulations. Industrial management and job security. Assessment and risk analysis. Prevention management. Safety in chemical plants. Preparation of technical reports and scientific papers. Project management of technological innovation. Sources of information and funding R + D + I. Strategy for protection and exploitation of R + D + I.

Vniver§itatöt d'València

# PREVIOUS KNOWLEDGE

#### Relationship to other subjects of the same degree

There are no specified enrollment restrictions with other subjects of the curriculum.

#### **Other requirements**

Some prior basic knowledge is recommended on the principles of quality, safety and prevention of occupational risks.

## OUTCOMES

#### 2209 - M.D. in Chemical Engineering

- Students should apply acquired knowledge to solve problems in unfamiliar contexts within their field of study, including multidisciplinary scenarios.
- Students should be able to integrate knowledge and address the complexity of making informed judgments based on incomplete or limited information, including reflections on the social and ethical responsibilities associated with the application of their knowledge and judgments.
- Students should demonstrate self-directed learning skills for continued academic growth.
- Students should possess and understand foundational knowledge that enables original thinking and research in the field.
- Lead and define multidisciplinary teams which can make technical changes and address managerial needs in both national and international contexts.
- Conceive, plan, calculate and design processes, equipment, industrial facilities and services in the field of chemical engineering and other related industrial sectors in terms of quality, safety, economics, rational and efficient use of natural resources and environmental conservation.
- Lead and manage, both technically and economically, projects, facilities, plants, companies and technological centres in the field of chemical engineering and related industrial sectors.
- Conduct proper research, undertake the design and lead the development of engineering solutions in new or unfamiliar environments by linking creativity, originality, innovation and technology transfer.
- Be able to analyse and synthesise for the continued progress of products, processes, systems and services while applying criteria of safety, affordability, quality and environmental management.
- Integrate knowledge and handle the complexity of formulating judgments and decisions, based on incomplete or limited information, which take account of the social and ethical responsibilities of professional practice.
- Communicate and discuss proposals and conclusions in specialised and non-specialised multilingual forums, in a clear and unambiguous manner.

Vniver§itatöt d'València

- Adapt to changes and be able to apply new and advanced technologies and other relevant developments with initiative and entrepreneurship.
- Have skills for independent learning in order to maintain and enhance the specific competences of chemical engineering which enable continuous professional development.
- Be able to access information tools in different areas of knowledge and use them properly.
- Be able to assess the need to complete their technical, scientific, language, computer, literary, ethical, social and human education, and to organise their own learning with a high degree of autonomy.
- Be able to defend criteria with rigor and arguments and to present them properly and accurately.
- Be able to take responsibility for their own professional development and specialisation in one or more fields of study.
- Lead and organise companies and production and service systems by applying knowledge and skills of industrial organisation, business strategy, planning and logistics, mercantile and labour regulations, and financial and cost accounting.
- Lead and manage the organisation of work and human resources by applying criteria of industrial safety, quality management, risk prevention, sustainability and environmental management.
- Manage research, development and technological innovation taking into account the transfer of technology and the property and patent rights.
- Manage and perform verification and control of facilities, processes and products, as well as certifications, audits, inspections, tests and reports.
- Adapt to structural changes in society caused by economic, energy or natural factors or phenomena in order to solve resulting problems and provide technological solutions with a high commitment to sustainability.

## LEARNING OUTCOMES

- To gain knowledge about quality management.
- To understand the operation of the systems management standardized quality.
- To learn the basic principles of audits as a management tool.
- To learn the basics of safety in industrial processes and complementary industrial facilities that serve these processes.
- To know and apply the legal regulations on industrial safety and prevention of occupational hazards, in particular, know and manage all the required legal documents to companies and organizations.
- To be able to apply the principles of preventive actions in both industrial projects and their exploitations.
- To know which are the agencies/institutions related to industrial safety, occupational risk prevention, quality and R & D
- To be able to develop a scientific / technical report.
- To understand the keys of managing technological innovation projects.
- To know the various forms and sources of funding for R + D + i. To acquire basic knowledge about the protection and exploitation of intellectual property, scientific and technological dissemination and transfer of technology

**VNIVERSITATÖDVALÈNCIA** 

# **DESCRIPTION OF CONTENTS**

### 1. Quality management

1. Basic Principles of Quality, management quality and management systems.

2. Introduction to management systems: ISO 9001 and 14001. Structure HLS. Benefits of Management Systems. Continuous improvement and process management. Implementation and certification. Documentation.

3. Management systems ISO 9001- ISO 14001: Standard requirements. Elements.

### 2. Industrial safety and occupational risk prevention

1. Basic principles of industrial and occupational safety. Basic legislation and key regulatory aspects. The Plan of Occupational Risks.

2. Techniques of control. Inspections security. Planned observations. Management of accidents. Documentation. Safety in chemical plants.

3. Regulatory Audits Prevention System. Legal bases. Auditing techniques. The administrative control. Risk assessment and analysis.

#### 3. Innovation management at chemical engineering

1. Innovation. Applied innovation. Tools for an innovation project.

2. Programmes of reseach, development and innovation (R+D+I). Public financing programmes. Preparation of proposals for the European Commision through the H2020 programme.

3. Communication and diffusion of R+D+I results. Diffusion and dissemination. Diffusion resources. Structure of a scientific-technical report.

4. Protection and exploitation of R+D+I results. How to protect your knowledge. Structure of R+D+I Contracts.

# WORKLOAD

| Hours  | % To be attended  |
|--------|---|
| 30,00  | 100   |
| 15,00  | 100   |
| 14,00  | 0   |
| 22,50  | 0   |
| 20,00  | 0   |
| 6,00   | 0   |
| 5,50   | 0   |
| 113,00 |   |
|        | 30,00<br>15,00<br>14,00<br>22,50<br>20,00<br>6,00<br>5,50 |

Vniver§itatö́ ®València

# **TEACHING METHODOLOGY**

The course will be developed through lectures and practical classes.

**Classroom sessions:** through participatory lectures, the main concepts will be developed to provide a comprehensive and integrated vision, analysing in detail the key and most complex aspects, promoting, at all times, student participation. Adequate resources for further preparation of the subject in depth by the student will be also recommended.

**Practical activities:** The practical sessions will complement the theoretical activities in order to apply the basics, and expand the knowledge and experience that the students acquired during the fulfilment of the proposed work. This will be done in the classroom or in small groups. The following types of classroom activities are included:

- Classes of exercises and questions in the classroom. The teacher will explain a number of standard exercises, which allow students to acquire the necessary skills to analyse, formulate and solve the problems of each subject. Some problems will be solved in practical sessions in small groups.
- Sessions for discussion and resolution of exercises. In these sessions the students will analyse and discuss a series of exercises or work previously posed by the teacher. These sessions will be conducted in small groups.
- Innovation project developed for students.

**Practices in the computer classroom.** In these sessions, students will use the commercial softwares. These sessions will be conducted in small groups.

For the development of all these activities, both students and the teacher will use the "Aula Virtual" platform. An schedule will be proposed for the student works.

## **EVALUATION**

The assessment of student learning will be carried out by proposing two modalities::

A) This mode is only applicable to students who have attended more than 80% of the classes. 5% of the mark corresponds to the assessment of student participation and attendance. 45% of the mark corresponds to the evaluation of the works. The remaining 50% will correspond to a test score. It will be a minimum requirement to pass the subject further from 4.0 in the exam.

Vniver§itatö́ d'València

B) The grade will be obtained from the note of a test (60%) that will be made on the official date and the grade obtained in the works (40%). It will be a minimum requirement to pass the subject to at least 5.0 on the exam. Students who opt for option A), and who do not approve the subject in the first call of this form, must submit to the examination of the second call and the form of evaluation will be, then, that of modality B).

The work of the industrial safety and risk prevention section, with a weight of 30% of the total of the work assessment, will not be recoverable.
