<b>Code</b>	44429
<b>Name</b>	Comprehensive management of quality, safety and innovation
<b>Cycle</b>	Master's degree
<b>ECTS Credits</b>	4.5
<b>Academic year</b>	2021 - 2022

**Study (s)**

<b>Degree</b>	<b>Center</b>	<b>Acad. year</b>	<b>Period</b>
2209 - M.D. in Chemical Engineering	School of Engineering	1	First term

**Subject-matter**

<b>Degree</b>	<b>Subject-matter</b>	<b>Character</b>
2209 - M.D. in Chemical Engineering	2 - Comprehensive management of quality, safety and innovation	Obligatory

**Coordination**

<b>Name</b>	<b>Department</b>
BADIA VALIENTE, JOSE DAVID	245 - Chemical Engineering
BELTRAN TAURA, PAULA	245 - Chemical Engineering
MARTINEZ SORIA, VICENTE	245 - Chemical Engineering

**SUMMARY**

4.5 ECTS compulsory subject in the first semester of the Master in Chemical Engineering, which is taught in Spanish. This course is part of the management and production optimization and sustainability module. It consists of 3 distinct thematic blocks in which the course is structured: Quality management, industrial safety and occupational risk prevention and management innovation.

The course contents are summarized as: quality, environment, PRL, quality management: business management standard scopes. Implementation and management system audits. Main risks and prevention measures. Implementing regulations. Industrial management and job security. Assessment and risk analysis. Prevention management. Safety in chemical plants. Preparation of technical reports and scientific papers. Project management of technological innovation. Sources of information and funding R + D + I. Strategy for protection and exploitation of R + D + I.

## PREVIOUS KNOWLEDGE

### Relationship to other subjects of the same degree

There are no specified enrollment restrictions with other subjects of the curriculum.

### Other requirements

Some prior basic knowledge is recommended on the principles of quality, safety and prevention of occupational risks.

## OUTCOMES

### 2209 - M.D. in Chemical Engineering

- Students should apply acquired knowledge to solve problems in unfamiliar contexts within their field of study, including multidisciplinary scenarios.
- Students should be able to integrate knowledge and address the complexity of making informed judgments based on incomplete or limited information, including reflections on the social and ethical responsibilities associated with the application of their knowledge and judgments.
- Students should demonstrate self-directed learning skills for continued academic growth.
- Students should possess and understand foundational knowledge that enables original thinking and research in the field.
- Lead and define multidisciplinary teams which can make technical changes and address managerial needs in both national and international contexts.
- Lead and manage, both technically and economically, projects, facilities, plants, companies and technological centres in the field of chemical engineering and related industrial sectors.
- Conduct proper research, undertake the design and lead the development of engineering solutions in new or unfamiliar environments by linking creativity, originality, innovation and technology transfer.
- Be able to analyse and synthesise for the continued progress of products, processes, systems and services while applying criteria of safety, affordability, quality and environmental management.
- Integrate knowledge and handle the complexity of formulating judgments and decisions, based on incomplete or limited information, which take account of the social and ethical responsibilities of professional practice.
- Communicate and discuss proposals and conclusions in specialised and non-specialised multilingual forums, in a clear and unambiguous manner.
- Adapt to changes and be able to apply new and advanced technologies and other relevant developments with initiative and entrepreneurship.
- Have skills for independent learning in order to maintain and enhance the specific competences of chemical engineering which enable continuous professional development.

- Be able to access information tools in different areas of knowledge and use them properly.
- Be able to assess the need to complete their technical, scientific, language, computer, literary, ethical, social and human education, and to organise their own learning with a high degree of autonomy.
- Be able to defend criteria with rigor and arguments and to present them properly and accurately.
- Be able to take responsibility for their own professional development and specialisation in one or more fields of study.
- Lead and manage the organisation of work and human resources by applying criteria of industrial safety, quality management, risk prevention, sustainability and environmental management.
- Manage research, development and technological innovation taking into account the transfer of technology and the property and patent rights.
- Manage and perform verification and control of facilities, processes and products, as well as certifications, audits, inspections, tests and reports.
- Adapt to structural changes in society caused by economic, energy or natural factors or phenomena in order to solve resulting problems and provide technological solutions with a high commitment to sustainability.

## LEARNING OUTCOMES

To acquire knowledge about quality management. To understand the performance of standard management systems. To know how to implement and maintain standardized management systems. To learn the basic principles of audits as management instruments. To know the legal and technical principles to be used in the development of regulatory audits of prevention systems. To learn the basic aspects of safety in industrial processes and complementary industrial facilities that provide service to these processes and their sources of law. To know and learn how to apply the legal regulations on industrial safety and occupational risk prevention, and in particular, know how to manage all the legal documentation required of companies and organizations. To learn how to apply security control techniques in workplaces. To be able to apply the principles of preventive action.. To know the organizations and institutions related to industrial safety, prevention of occupational risks, quality and R + D + i. To be able to communicate scientific-technological aspects through written reports or discussions in specialized forums. To acquire basic knowledge of the culture of innovation and entrepreneurship. To understand and apply the keys to defining the impact and managing technological innovation projects. To know the various forms and sources of funding for R & D & I, the institutional strategic guidelines, the requirements and the associated documentation. To be able to integrate the concepts and procedures of innovation in R + D + i in their own project. To acquire basic knowledge on the protection and exploitation of intellectual and industrial property, scientific-technical dissemination and technology transfer.

## DESCRIPTION OF CONTENTS

### 1. Quality management

1. Basic Principles of Quality, management quality and management systems.
2. Introduction to management systems: ISO 9001 and 14001. Structure HLS. Benefits of Management Systems. Continuous improvement and process management. Implementation and certification. Documentation.
3. Management systems ISO 9001- ISO 14001: Standard requirements. Elements.

### 2. Industrial safety and occupational risk prevention

1. Basic principles of industrial and occupational safety. Basic legislation and key regulatory aspects. The Plan of Occupational Risks.
2. Techniques of control. Inspections security. Planned observations. Management of accidents. Documentation. Safety in chemical plants.
3. Regulatory Audits Prevention System. Legal bases. Auditing techniques. The administrative control. Risk assessment and analysis.

### 3. Innovation management at chemical engineering

1. Innovation. Applied innovation. Tools for an innovation project.
2. Programmes of research, development and innovation (R+D+I). Public financing programmes. Preparation of proposals for the European Commission through the H2020 programme.
3. Communication and diffusion of R+D+I results. Diffusion and dissemination. Diffusion resources. Structure of a scientific-technical report.
4. Protection and exploitation of R+D+I results. How to protect your knowledge. Structure of R+D+I Contracts.

## WORKLOAD

ACTIVITY	Hours	% To be attended
Theory classes	30,00	100
Classroom practices	15,00	100
Development of group work	14,00	0
Development of individual work	22,50	0
Study and independent work	20,00	0
Preparation of evaluation activities	6,00	0
Preparation of practical classes and problem	5,50	0
<b>TOTAL</b>	<b>113,00</b>	

## TEACHING METHODOLOGY

The course will be developed through lectures and practical classes.

**Classroom sessions:** through participatory lectures, the main concepts will be developed to provide a comprehensive and integrated vision, analysing in detail the key and most complex aspects, promoting, at all times, student participation. Adequate resources for further preparation of the subject in depth by the student will be also recommended.

**Practical activities:** The practical sessions will complement the theoretical activities in order to apply the basics, and expand the knowledge and experience that the students acquired during the fulfilment of the proposed work. This will be done in the classroom or in small groups. The following types of classroom activities are included:

- Classes of exercises and questions in the classroom. The teacher will explain a number of standard exercises, which allow students to acquire the necessary skills to analyse, formulate and solve the problems of each subject. Some problems will be solved in practical sessions in small groups.
- Sessions for discussion and resolution of exercises. In these sessions the students will analyse and discuss a series of exercises or work previously posed by the teacher. These sessions will be conducted in small groups.
- Innovation project developed for students.

**Practices in the computer classroom.** In these sessions, students will use the commercial softwares. These sessions will be conducted in small groups.

For the development of all these activities, both students and the teacher will use the “Aula Virtual” platform. An schedule will be proposed for the student works.

## EVALUATION

The assessment of student learning will be carried out by

50% of the mark corresponds to the evaluation of the works. The remaining 50% will correspond to tests score. It will be a minimum requirement to pass the subject further from 4.5 in the exams.

The works of the innovation section will not be recoverable.

## ADDENDUM COVID-19

**This addendum will only be activated if the health situation requires so and with the prior agreement of the Governing Council**

### Contents

The contents initially included in the teaching guide are maintained.

## **Volume of work and temporary planning of teaching**

Regarding the workload:

The different activities described in the Teaching Guide are maintained with the planned dedication.

Regarding the temporary planning of teaching

The material for the follow-up of the theory/practical lessons allows to continue with the temporary teaching schedule both in days and hours, both if teaching is conventional face-to-face classroom-based or not.

## **Teaching methodology**

If it is required by the sanitary situation, the Academic Committee of the Degree will approve the Teaching Model of the Degree and its adaption to each subject, establishing the specific conditions in which it will be developed, taking into account the actual enrolment data and the space availability.

## **Evaluation**

The evaluation system described in the Teaching Guide of the subject in which the different evaluable activities have been specified as well as their contribution to the final mark of the subject is maintained.

If there is a closure of the facilities for health reasons that affect the development of any face-to-face evaluable activity of the subject, it will be replaced by a test of a similar nature that will be carried out in virtual mode using the computer tools licensed by the University of Valencia. The contribution of each evaluable activity to the final mark of the subject will remain unchanged, as established in this guide.

## **Bibliography**

The bibliography recommended in the Teaching Guide is kept as it is accessible and is complemented with notes, slides and problems uploaded to the Virtual Classroom as subject material
